# Abuse report > Abuse report

# Abuse Report settings

Confirmation text:	Confirmating text which will be displayed when abuse report is successfully saved.
Title of abuse report:	Title which will be displayed in the list of abuse reports in CMS Desk.

# Abuse report > In-line abuse report

CompanyLogo	Their shapping rank to empty:
Home     Services     Products     News     Patters     Company     Blogs     Forums     Events     emages       Mode strated     Example     Images     Images	Contains link which opens Abuse Report web part.

# **Inline Abuse Report properties**

Confirmation text:	Confirmating text which will be displayed when abuse report is successfully saved.
Title of abuse report:	Title which will be displayed in the list of abuse reports in CMS Desk.

# Articles > Article list

Article 1	
Article 2	
	Displays a list of articles.

## Content

Path:	Path of the documents to be displayed.
Data source name:	ID of data source web part that provides data displayed by this web part.

# **Content filter**

Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Select top N documents:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter out duplicate documents:	If the displayed data contains multiple links to the same document, you can choose to display only one of them.
Filter name:	Filter name of external filter connected to this web part.

## Transformations

Transformation:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Selected item transformation:	Transformation used in the detail view mode.
Item separator:	Item separator displayed between records.
Nested controls ID:	Sets the nested controls IDs. Use ';' as a separator; Example: myRepeaterID;myDatalistID;myRepeaterID2. This property replaces the previously used NestedRepeaterID and NestedDataListID properties. If you are still using these properties, no changes to functionality will occur, but it is advisable to rewrite your code to use the new property instead. If you need to dynamically set properties of a nested control, you have to set its

DelayedLoading property to 'True'. Please note that this setting can cause problems with ViewState.

# Paging

Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Navigation buttons:	Indicates if back/next buttons should be displayed.
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last buttons:	Indicates if First and Last buttons should be displayed.
HTML before:	HTML code before the results summary text.
HTML after:	HTML code after the results summary text.
Results position:	Position of the results summary text.
Numbers separator:	HTML code between the page numbers.

## Relationships

Main document:	Document for which you want to display its related documents.
Main document is on the left side:	Indicates if the given document is on the left side of the relationship.
Relationship name:	Name of the relationship between documents.

## System settings

Show Edit and Delete buttons:

Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.
No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.
Editing buttons	
Show New button:	Indicates if the button for adding new items should be displayed in the editing mode when viewing the page.
New button text:	New button description text.
Show Edit and Delete buttons:	Indicates if edit and delete buttons should be automatically shown for each

item in the editing mode.

Please note: you can find an example of datalist/repeater nesting in <u>CMSRepeater</u> chapter.

# Attachments > Attachment image gallery

### Content

Path:

Path of the documents to be displayed.

### Filter

Filter name:	Filter name of external filter connected to this web part.
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select top N attachments:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Attachment group:	Attachment group (name of the filed on the Form tab) from which the attachments will be taken. Applicable if you want grouped attachments to be displayed.

### Repeater

Transformation:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Selected item transformation:	Transformation used in the detail view mode.
Separator Transformation Name:	Item separator displayed between records.
Header Transformation Name:	Transformation used for the header.
Footer Transformation Name:	Transformation used for the footer.

### No data behavior

Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

### Pager

### Kentico CMS 4.1 - Web Parts Reference

Page size:	Number of records per page.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Query string key:	The name of the URL parameter that will contain the current page number.
Group size:	Sets the number of pages displayed for current page range.
Display first & last automatically:	Indicates if First and Last buttons should be displayed.
Display previous & next automatically:	If checked, previous and next buttons of the pager will be displayed only where usable.
Hide pager for single page:	Sets the value that indicates whether pager should be hidden for single page.

# Pager design

Pages:	Sets transformation for page links. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval ("PageLink") %> to get page link.
Current page:	Sets the current page transformation. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval("PageLink") %> to get page link.
Page separator:	Sets transformation for separator of page links.
First page:	Sets transformation for link to the first page. Use <%# Eval("FirstURL") %> to get link to the first page.
Last page:	Sets transformation for link to the last page. Use <%# Eval("LastURL") %> to get link to the last page.
Previous page:	Sets transformation for link to the previous page. Use <%# Eval ("PreviousURL") %> to get link to the previous page.
Next page:	Sets transformation for link to the next page. Use <%# Eval("NextURL") %> to get link to the next page.
Previous group:	Sets transformation for link to the previous group of pages. Use <%# Eval ("PreviousGroupURL") %> to get link to the previous group.
Next group:	Sets transformation for link to the next group of pages. Use <%# Eval ("NextGroupURL") %> to get link to the next group.
Pager layout:	Sets transformation for overall pager layout.

# System settings

Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.

# LightBox Configuration

Allways visible navigation buttons:	Indicates whether the navigation buttons are always visible, not only on mouse over.
Frame width:	Width of lightbox frame.
Frame height:	Height of lightbox frame.
Path to external CSS file:	URL path to the external CSS file needed by Lightbox.
Overlay opacity:	Transparency of the background (0 - transparent, 1 - dark).
Animate:	Indicates if the animation should be enabled or not.

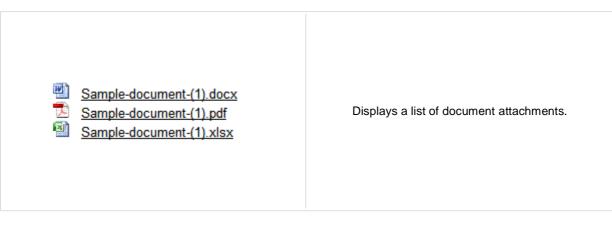

### Kentico CMS 4.1 - Web Parts Reference

Load delay:	Load delay time (in milliseconds). If you are using automatic resizing (width & height are not set), this value indicates how long will the lightbox wait before taking content's proportions to perform resize. If you are having difficulties with displaying the lightbox content, try use higher value.
Resize speed:	You can choose the speed of the resizing images from 1 (slowest) to 10 (fastest).
Border size:	Size of the image border.
Loading image:	Image displayed during lightbox loading.
Close button image:	Close button image.
Previous button image:	Previous button image.
Next button image:	Next button image.

When writing a custom transformation for the Lightbox web part, it is necessary to use the 'rel' and 'rev' parameters as highlighted in the transformation code below. The 'title' parameter is used to determine the description of the image displayed in the lightbox.

```
<a href="<%# GetDocumentUrl() %>" rel="lightbox[group]" rev="<%# Eval
("NodeAliasPath") %>" title="<%# Eval("FileDescription") %>"><img src="<%#
GetFileUrl("FileAttachment") %>?maxsidesize=150" alt="<%# Eval("FileName") %
>" /></a>
```

### **Community > Group message board**

David We are proud to announce that our group has already two members! 11/20/2008 3:21:17 PM

Displays the list of the messages with the dialog to add a new message to the board. Board is owned by the group.

#### Display

Message transformation:	Transformation used in the list view mode.
Enable edit:	Indicates whether the message EDIT button should be displayed
Enable delete:	Indicates whether the message DELETE button should be displayed
Enable approve:	Indicates whether the message APPROVE button should be displayed
Enable reject:	Indicates whether the message REJECT button should be displayed
No messages text:	Text displayed when there are no messages to be displayed.

#### Board default settings - THESE SETTINGS ARE APPLIED ONLY TO NEW BOARDS!

Display name:	Board display name. You can also use macros for the name.
Access:	Specifies the message board security access level. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Moderators:	Default moderators for the newly created message board. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Moderated:	Indicates whether the board is moderated or not. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards. Indicates whether the board message requires e-mail address. This property
Require e-mail addresses:	is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Use security code:	Indicates whether the board uses the security CAPTCHA feature. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Open:	Indicates whether the board is opened. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Open from:	Board opening date. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Open to:	Board closing date. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Enable subscriptions:	Indicates whether the subscription feature should be enabled. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Unsubscription URL:	URL of the page used to unsubscribe from the subscribed message board. If it is not specified, default unsubscription URL from SiteManager -> Settings is used. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.

Additional documentation text is	not provided.
Enable anonymous read:	Indicates whether the anonymous read is enabled
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Security	
Max rating value:	Sets size of the content rating scale.
Rating type:	Determines which type of content rating will be used.
Enable content rating:	If checked, content rating is enabled.
Content rating	
Board base URL:	URL used as the URL base of links to message boards in notification e- mails; if empty, value from Site Manager -> Settings -> Message boards -> Board base URL will be used; if that property is empty too, message boards can not be placed on pages with wildcard URLs.

## **Community > Group security access**

Invisible on the live site

Special web part that checks access permissions to group content.

Act	tions	Document name	Published	Last modified	Displays a list of group's contributions of
<b>S</b>	×	Editable article 1	Yes	1/23/2008 11:23:38 AM	only the New document button.
<b>S</b>	×	User contribution	Yes	1/23/2008 1:05:27 PM	

#### Content

Path:

Path of the documents to be displayed.

User contributions
--------------------

Path for new documents:	Path where new documents created using the New document button will be stored. E.g.: /news
Allowed new document types:	List of document types (their code names) that can be created using the New document button. You can specify multiple document types separated with a semicolon (;). E.g.: cms.news;cms.article
Alternative form name:	Name of the alternative form which will be used to change form definition and/or layout. Remove class name if more document types are allowed.
Validation error message:	This message will be displayed after validation failed. Default error message will be used if this one is not set.
Display list of documents:	Indicates if the list of documents should be displayed or only the New document button should be displayed.
New document page template:	The default page template assigned to all documents created through the Contribution list web part. If you leave the value empty, the documents will inherit the parent page template by default.
New item button label:	Text used for 'New item' button.
List button label:	Text used for 'List' button.

#### **Content filter**

Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.

Security

#### Kentico CMS 4.1 - Web Parts Reference

Check permissions:	Indicates if document permissions should be checked. The access is controlled also by the Check group permissions and Allow editing by users value. Indicates if group permissions should be checked. The access is controlled
Check group permissions:	also by the Check permissions and Allow editing by users value.
Allow insert:	Indicates if the New document button should be displayed.
Allow edit:	Indicates if the edit button should be displayed.
Allow delete:	Indicates if the delete button should be displayed.
Allow editing by users:	Specifies what kind of users can edit the documents using this control: - All users (any user who comes to the web site) - Authenticated users (only users with user name and password) - Document owners (only document owners can edit the content)

Check permissions:	controlled also by the Check group permissions and the Allow editing by users value.
Check group permissions:	Indicates if group permissions should be checked. The access is controlled also by the Check permissions and the Allow editing by users value.
Allow delete:	Indicates if the delete button should be displayed.
Allow editing by users:	Specifies what kind of users can edit the documents using this control: - All users (any user who comes to the web site) - Authenticated users (only users with user name and password) - Document owners (only document owners can edit the content)

### **Community > Group media libraries viewer**

Used for displaying group medial libraries.

#### Community

Group name:

Code name of the group.

#### Repeater

Transformation Name:	Transformation used in the list view mode.
AlternatingItem Transformation Name:	Transformation used in the list view mode for even items.
Separator Transformation Name:	Transformation used for the separator.
Header Transformation Name:	Transformation used for the header.
Footer Transformation Name:	Transformation used for the footer.

#### No data behaviour

Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

#### Filter

ORDER BY condition:	ORDER BY part of the SELECT query.
Select Top N members:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Selected columns:	Only selected columns will be displayed.

#### Pager

Page size:	Number of records per page.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Querystring key:	The name of the URL parameter that will contain the current page number.

#### Kentico CMS 4.1 - Web Parts Reference

Group size:	Sets the number of pages displayed for current page range.
Display first & last automatically:	If checked, first and last buttons of the pager will be displayed only where usable.
Display previous & next automatically:	If checked, previous and next buttons of the pager will be displayed only where usable.
Hide pager for single page:	Sets the value that indicates whether pager should be hidden for single page.
Pager design	
Pages:	Sets transformation for page links. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval ("PageLink") %> to get page link.
CurrentPage:	Sets the current page transformation. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval("PageLink") %> to get page link.
Page separator:	Sets transformation for separator of page links.
First page:	Sets transformation for link to the first page. Use <%# Eval("FirstURL") %> to get link to the first page.
Last page:	Sets transformation for link to the last page. Use <%# Eval("LastURL") %> to get link to the last page.
Previous page:	Sets transformation for link to the previous page. Use <%# Eval ("PreviousURL") %> to get link to the previous page.
Next page:	Sets transformation for link to the next page. Use <%# Eval("NextURL") %> to get link to the next page.
Previous group:	Sets transformation for link to the previous group of pages. Use <%# Eval ("PreviousGroupURL") %> to get link to the previous group.
Next group:	Sets transformation for link to the next group of pages. Use <%# Eval ("NextGroupURL") %> to get link to the next group.
Pager layout:	Sets transformation for overall pager layout.
System settings	
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used. List of the cache keys on which the cached data depend. When the cache

## Community services > Google video

Enables to insert the video from specified URL location.

#### **Video properties**

Video URL:	URL address of the video file.
Width:	Width of the displayed video area.
Height:	Height of the displayed video area.
Auto start play:	Indicates if the video should be played automatically.
Automatically activate the object:	Indicates if the object should be automatically activated. The 'Click to activate' message is not shown.

### **Community services > Social bookmarking**

Bookmark this page to: 🔍 🖪 🕗 🍃 🚏 🔛 🖬 🌌 🔯 💿 는 🗶 😭 📼

Used for bookmarking the current page by one of the many available social bookmarking services.

#### Content

Title:	Title text displayed above bookmark links.
Title CSS class:	CSS class used for title styling.
Separator:	Separator used between bookmarking service icons.
Open links in new window:	Determines if new window should be opened after clicking a bookmarking service icon.

#### **Bookmarking services**

Ask:	Determines if Ask bookmarking link should be included.
Backflip:	Determines if Backflip bookmarking link should be included.
Blogmarks:	Determines if Blogmarks bookmarking link should be included.
Delicious:	Determines if Delicious bookmarking link should be included.
Digg:	Determines if Digg bookmarking link should be included.
Diigo:	Determines if Diigo bookmarking link should be included.
Facebook:	Determines if Facebook bookmarking link should be included.
Faves:	Determines if Faves bookmarking link should be included.
Furl:	Determines if Furl bookmarking link should be included.
Google Bookmarks:	Determines if Google Bookmarks bookmarking link should be included.
Google Bookmarks: Link-a-Gogo:	Determines if Google Bookmarks bookmarking link should be included. Determines if Link-a-Gogo bookmarking link should be included.
-	
Link-a-Gogo:	Determines if Link-a-Gogo bookmarking link should be included.
Link-a-Gogo: Live:	Determines if Link-a-Gogo bookmarking link should be included. Determines if Live bookmarking link should be included.
Link-a-Gogo: Live: Mister Wong:	Determines if Link-a-Gogo bookmarking link should be included. Determines if Live bookmarking link should be included. Determines if Mister Wong bookmarking link should be included.
Link-a-Gogo: Live: Mister Wong: Mixx:	Determines if Link-a-Gogo bookmarking link should be included. Determines if Live bookmarking link should be included. Determines if Mister Wong bookmarking link should be included. Determines if Mixx bookmarking link should be included.
Link-a-Gogo: Live: Mister Wong: Mixx: Multiply:	Determines if Link-a-Gogo bookmarking link should be included. Determines if Live bookmarking link should be included. Determines if Mister Wong bookmarking link should be included. Determines if Mixx bookmarking link should be included. Determines if Multiply bookmarking link should be included.

#### Kentico CMS 4.1 - Web Parts Reference

Reddit:	Determines if Reddit bookmarking link should be included.
Segnalo:	Determines if Segnalo bookmarking link should be included.
Simpy:	Determines if Simpy bookmarking link should be included.
Slashdot:	Determines if Slashdot bookmarking link should be included.
Spurl:	Determines if Spurl bookmarking link should be included.
StumbleUpon:	Determines if StumbleUpon bookmarking link should be included.
Technorati:	Determines if Technorati bookmarking link should be included.
Twitter:	Determines if Twitter bookmarking link should be included.
Yahoo Bookmarks:	Determines if Yahoo Bookmarks bookmarking link should be included.
Yahoo MyWeb:	Determines if Yahoo MyWeb bookmarking link should be included.

### **Content rating > Content rating**

★★★★★Current rating: 0 (0 ratings)

Used to enable rating of document content.

#### Scale settings

Rating value:	This property could be used to preset rating value. If it is not set then current document rating value is used. Rating value must be a number from the interval <0, 1>.
Rating type:	Determines which type of content rating will be used.
Max rating value:	Sets size of the content rating scale.

#### Messages

Show results:	Determines if overall results should be shown.
Result message:	Message displaying overall rating results. The {0} macro shows overall rating (for one decimal rounding, you can use {0:0.#} ); {1} displays the total number of votes.
Message after rating:	Message displayed to the user after rating. Macros that can be used: {0} your rating, {1} overall rating, {2} overall number of votes.

#### Permissions

Check permissions:	If true, permissions set by the Allow for public and Hide to unauthorized roles properties below will be checked. If false, rating will be allowed for every site visitor including anonymous public ones.
Allow zero value:	If true user is allowed to rate without choosing any value. In other case the rating is denied and error message is displayed.
Error message:	This error message is shown if user rates without choosing any value and null value is disabled.
Anonymous users can rate:	If true, rating is allowed for anonymous public users.
Check if user rated:	Determines if check should be performed on whether the current user already rated. In such case, further rating will not be allowed for the user.
Hide to unauthorized users:	If true, the web part will be hidden to anonymous public users.

### **Custom tables > Custom table repeater**

Item text: Sample text 1
Item text: Sample text 2
Item text: Sample text 3

Displays a repeater with data retrieved from custom table.

#### Content

Custom table:	Custom table which should be used to display items.
Content filter	
ORDER BY expression:	ORDER BY part of the SELECT query.
Select top N documents:	Selects only top N items. If blank, all items are selected.
WHERE condition:	WHERE part of the SELECT query.
Filter name:	External filter name.
Transformations	
Transformation name:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Item separator:	Item separator displayed between records.
Paging	
Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Navigation buttons:	Indicates if the back/next buttons should be used.
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last buttons:	Indicates if First and Last buttons should be displayed.
HTML before:	HTML code before the results summary text.
HTML after:	HTML code after the results summary text.
Results position:	Position of the results summary text.
Numbers separator:	HTML code between the page numbers.

### System settings

Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.
No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

### Custom tables > Custom table datagrid

<u>ItemID</u>	<u>ltemCreatedBy</u>	<u>ltemCreatedWhen</u>
4	53	10/20/2008 1:42:40 PM
5	53	10/20/2008 1:42:52 PM
6	53	10/20/2008 1:43:01 PM

Displays a grid with data retrieved from custom table.

#### Content

Set first page after chage sorting:

page.

Custom table:	Custom table which should be used.
Content filter	
ORDER BY expression:	ORDER BY part of the SELECT query.
Select top N documents:	Selects only top N items. If blank, all items are selected.
WHERE condition:	WHERE part of the SELECT query.
Filter name:	External filter name.
Design	
Displayed columns:	Allows you to select and configure the displayed columns.
Show header:	Indicates if header should be shown.
Show footer:	Indicates if footer should be shown.
Tool tip:	Tool tip displayed when the table is mouse-overed.
Skin ID:	Skin ID.
Paging	
Enable paging:	Indicates if displayed data should be paged.
Page size:	Number of records per page.
Pager style:	You can choose between Previous/Next buttons and page numbers.
Sorting	
•	
Enable sorting:	Indicates if sorting should be used.
Default sort field:	Name of the field that will be used for sorting by default.
Sort ascending:	Indicates if the default sorting should be ascending.

Indicates if after sorting change should be displayed first page or current

Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID. The number of minutes for which the content is kept in the cache until the
Cache minutes:	latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used. List of the cache keys on which the cached data depend. When the cache
Cache dependencies:	item changes, the cache of the web part is also deleted. Each line contains one item.
No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

### **Custom tables > Custom table datalist**

<b>Item text:</b> Sample text 1	
Item text: Sample text 2	
Item text: Sample text 3	

Displays a multicolumn/multi-line list with data retrieved from custom table.

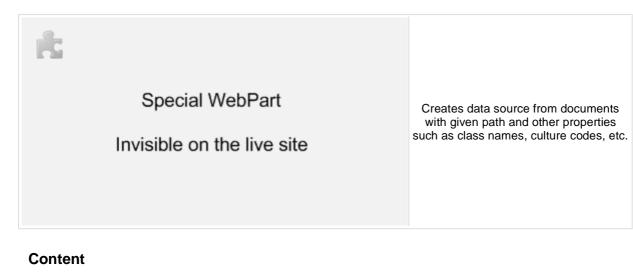

#### Content

Custom table:	Custom table which should be used.
Content filter	
ORDER BY expression:	ORDER BY part of the SELECT query.
Select top N documents:	Selects only top N items. If blank, all items are selected.
WHERE condition:	WHERE part of the SELECT query.
Filter name:	External filter name.
Transformations	
Transformation:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Layout	
Repeat columns:	Number of columns.
Repeat direction:	Direction in which the items should be displayed when more than one columns are used - either vertical or horizontal.
Repeat layout:	Layout of the control - either tables or flow layout (without any predefined structure).
Paging	
Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Navigation buttons:	You can select if you want to use back/next buttons or not.
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last buttons:	Indicates if First and Last buttons should be displayed.

## Kentico CMS 4.1 - Web Parts Reference

HTML before:	HTML contnet before the paging summary text.
HTML after:	HTML contnet after the paging summary text.
Results position:	Position of the paging summary text.
Numbers separator:	Separator sign between the page numbers.
System settings	
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.

# Data sources > Friends data source

#### Filter If you choose some user, the data source provides friends of the selected Username: user. If blank, friends of the user in current SiteContext will be provided. Based on this drop-down list, the data source provides only friends who are Friend status: in the Approved/Rejected/Waiting for approval status. Select only approved: Indicates if only approved items should be selected. ORDER BY condition: ORDER BY part of the SELECT query. Code name of the web site from which you want to display the content. If Site name: you leave the value empty, the content is retrieved from the current web site. WHERE condition: WHERE part of the SELECT query. Filter: Filter name of external filter connected to this web part. Selected columns: Only selected columns will be displayed. System settings

Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.

# Data sources > Products data source

Invisible on the live site

Creates data source from products. Users can filter results with appropriate filter settings.

### Filter

riic

ORDER BY expression:	ORDER BY part of the SELECT query.
Select Top N items:	Selects only top N items. If blank, all items are selected.
WHERE condition:	WHERE part of the SELECT query.
Filter name:	Filter name of external filter connected to this web part.
Selected columns:	Only selected columns will be displayed.
System settings	
System settings Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.

# Data sources > Media files data source

#### Filter

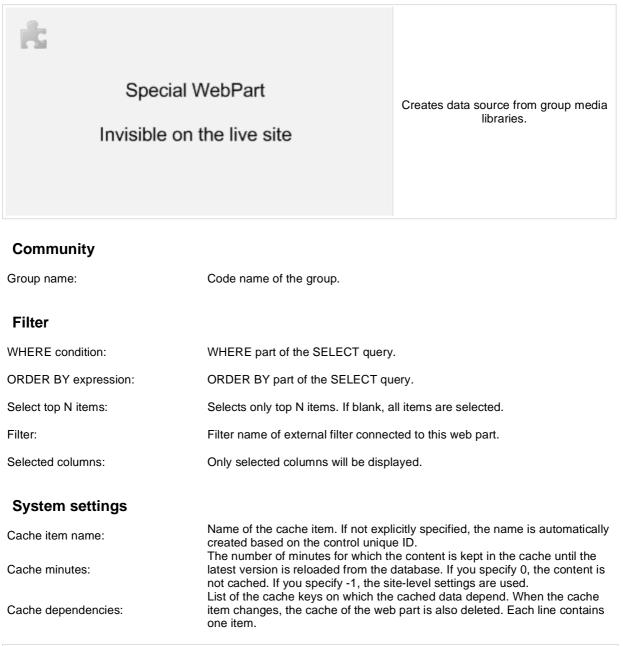

Media library name:	Specifies which library should be used as a data source for media files.
File ID querystring key:	Sets querystring parameter for file id value.
File path:	Specifies which file path should be used in WHERE condition for selecting media files.
File extension:	Specifies which file extension should be used in WHERE condition for selecting media files.
WHERE condition:	WHERE part of the SELECT query.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select top N items:	Selects only top N items. If blank, all items are selected.
Filter:	Filter name of external filter connected to this web part.
Selected columns:	Only selected columns will be displayed.
System settings	
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.

# Data sources > Media libraries data source

Show group libraries:	Indicates if group libraries should be included.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select top N items:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter:	Filter name of external filter connected to this web part.
Selected columns:	Only selected columns will be displayed.
System settings	
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.

#### General

Default URL after purchase: Allow forgotten password retrieval:	Default page where the user should be redirected if no URL is specified for the given payment option. Indicates if the forgotten password can be retrieved in the Shopping Cart sign-in dialog.
Display step images:	Indicates if the images should be displayed during the order process
Image step separator:	The separator displayed between shopping progress images.
Enable product price detail:	Indicates if the link to the price detail page should be displayed.
Required fields mark:	HTML code for the required fields mark, e.g. asterisk (*)
Registration form	
	If you enter some role to this field, the user will be automatically assigned to

Assign user to roles:	It you enter some role to this field, the user will be automatically assigned to it after registration.
Assign to sites:	If you enter some site here, users will be automatically assigned to the site after registration.
Notify administrator about new registrations to e-mail address:	Enter administrator's e-mail address if you want to send registration notification message.

## **Conversion tracking**

Registration conversion name:	Name of the registration conversion used in web analytics.
Order conversion name:	Name of the order conversion used in web analytics.

# E-commerce > Shopping cart preview

Shopping cart   My account   My wishl	
Your shopping cart is emp	ty Display total price of all items in shopping cart and link to shopping cart content.

## General

Shopping cart link URL:	URL of the page with shopping cart. If not set, the default URL from the Site Manager/Manager/Settings/E-commerce/Shopping cart URL settings is used.
Shopping cart link text:	Text of the link to the shopping cart page.
Wishlist link URL:	URL of the page with wish list web part. If not set, the default URL from the Site Manager/Settings/E-commerce/Wishlist URL settings is used.
Wishlist link text:	The link text for the wish list URL.
My Account link URL:	URL of the page with My Account web part. If not set, the default URL from the Site Manager/Settings/E-commerce/My account URL settings is used.
My Account link text:	Text of the link to the My Account page.
Total price text:	Text displayed next to the total price.
Show total price row:	Indicates if total price row should be displayed.

# E-commerce > Product datalist

#### Content

ORDER BY:	ORDER BY part of the SELECT query.
Select top N:	The number of latest products that should be displayed in the archive. If you leave the value empty, the web part displays all products.
WHERE condition:	WHERE part of the SELECT query.
Filter name:	Name of the filter webpart which should be used.

### Layout

Repeat columns:	Number of columns.
Repeat direction:	Direction in which the items should be displayed when more than one columns are used - either vertical or horizontal.
Repeat layout:	Layout of the control - either tables or flow layout (without any predefined structure).

## Transformations

Transformation name:	Transformation used in the list view mode.
Alternating transformation name:	Transformation used in the list view mode for even items.
Selected item transformation name:	Transformation used in the detail view mode.

## Paging

Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last last buttons:	Indicates if First and Last buttons should be displayed.

## No data behavior

Hide control for zero rows: Indicates if content should be hidden when no record is found.
--

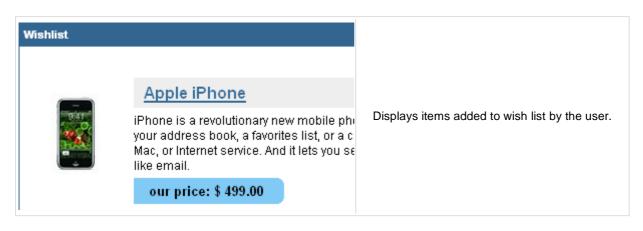

No record found text:

Text that should be displayed if no data is found.

#### Transformations and available fields

You can use the CMS.Root.GeneralProductPreview and CMS.Root.GeneralProductDetail transformations as example of how to create transformations for this web part. You can use all fields of the **COM\_SKU** table.

# E-commerce > Wishlist

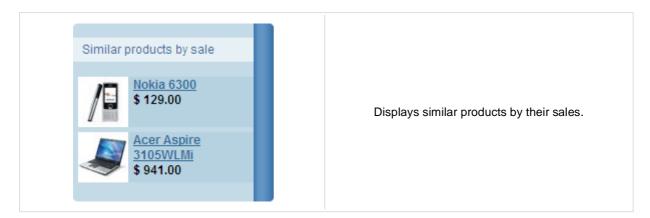

#### Transformations

Transformation name:

Transformation used in the list view mode.

# E-commerce > Similar products by sale

## **Content filter**

Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
Path:	Path of the documents to be displayed.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Select top N products:	Selects only top N products. If blank, all items are selected.
WHERE condition:	WHERE part of the SELECT query.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Culture code:	Culture version of the displayed content.
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Transformations	
Transformation name:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
System settings	

Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.

## No data behavior

Hide if no record found:	Indicates if content should be hidden when no record is found.
--------------------------	--

No record found text:

Text that should be displayed if no data is found.

You can find an example of datalist/repeater nesting in <u>CMSRepeater</u> chapter.

# E-commerce > Random products

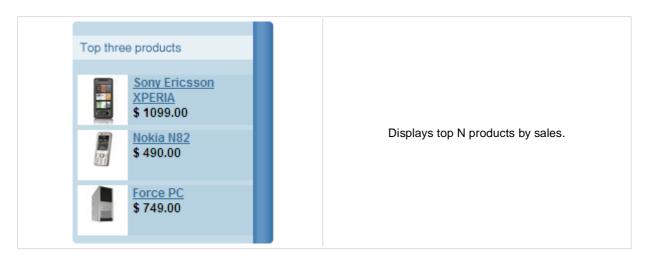

#### **Content filter**

Product public status:	Public status of products which should be displayed.
Product internal status:	Internal status of products which should be displayed.
Product department:	Department of products which should be displayed.

Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Navigation buttons:	You can choose to show back/next buttons.
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last buttons:	Indicates if First and Last buttons should be displayed.
HTML before:	HTML content before the search results summary.
HTML after:	HTML content after the search results summary.
Results position:	Position of the search results summary text.

Numbers separator: Separator sign between the page numbers.

# System settings

Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
	The number of minutes for which the content is kept in the cache until the
Cache minutes:	latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used. List of the cache keys on which the cached data depend. When the cache
Cache dependencies:	item changes, the cache of the web part is also deleted. Each line contains one item.

# Partial caching (hidden)

**CSS classes and design:** the design depends only on the specified transformation and on the CSS classes used by the .<u>CMSSearchDialog, CMSSearchResults</u> controls.

# Full-text search > SQL Search box

# Search box settings

Search button text:	Text displayed on the search button.
Search button CSS class:	CSS class name of the button.
Search label text:	Text displayed on the search label.
Search label CSS class:	CSS class name of the label.
Search textbox CSS class:	CSS class name of the textbox.
Search results page URL:	URL of the page the displays the search results. This page must contain either Search results or Search dialog with results web parts.
Show search label:	Indicates if the label before the search field should be displayed.
Search mode:	Default search mode - all words/any word/exact phrase.
Skin ID:	Skin ID.
Button settings	
Show image button:	Indicates if the search button should be displayed as an image.
Button image url:	URL of the image used for the button.

# Full-text search > Smart search dialog

# Full-text search > Smart search filter

#### **Filter settings** Id of dialog or dialog with results webpart. Webpart must be on the same Search webpart ID: page. This property must be filled only if you want to use smart search filter. Filter mode: Mode of filter - Checkboxes, radio buttons or dropdown list. Filter layout: Horizontal or vertical layout. Filter auto postback: Whether autopostback is enabled. Values which are shown in filter. Format of every filter field is: fieldname;value;display name on each line - example: field;value;Display name. If you want to use filter for sorting second field (value) is ignored (e.g. Values: ##SCORE##;;Score sorts results by score). If you want to have option which does not filter any result insert line where only display name is filled (e.g ;;All). Query name which creates filter, query must return at least three columns, Query name: format is: fieldname, value, display name. WHERE condition for your query. If you want to use it you must insert Query WHERE condition: ##WHERE## macro to your query. This macro will be replaced by content of this field. ORDER BY expression for filter query. If you want to use it you must insert Query ORDER BY clause: ##ORDERBY## macro to your query. This macro will be replaced by content of this field. Sets filter clause. Possible choices are: None - no clause is added. Must adds to resulting filter condition(all selected conditions separated by space) Filter clause: query MUST mark(+) - all conditions must be fullfiled. Must not - adds to resulting filter query MUST NOT mark(-) - same behavior like MUST mark but this mark inverts meaning of conditions. Index of preselected index in filter. If you leave this field empty none field will Default selected index: be selected by default. If you use checkbox filter mode you can select multiple choices by separating them by semicolon. If is true, filter generates search where condition. If is false, filter generates Filter is conditional: search sort condition.

# Full-text search > Search accelerator (for IE8)

# **General > Filter**

Search filter Menu-controls Path filter	Web part used when you create your custom filter. This web part should then be placed on a page and connected to the physical .ascx file with your filter.
Filter properties	

Filter name:	Name of the filter that is used in the Filter name property of the target web part.
Filter control path:	Physical path in the file system to the .ascx control with your custom filter.

# Google services > Google maps

Displays the maps obtained from google.

#### Content

Path:

Path of the documents to be displayed.

#### **Content filter**

Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Select top N documents:	Selects top N document types from Document types field.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter out duplicate documents:	If the displayed data contains multiple links to the same document, you can choose to display only one of them.

## Transformations

Transformation:
-----------------

Transformation used in the list view mode.

#### Map properties

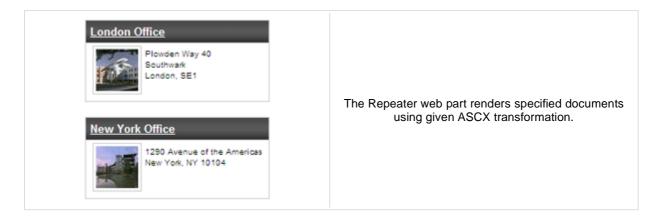

Google maps key:	Field to enter the key generated via Google Maps API web site. You can enter either a single key without domain name or multiple keys divided by a semicolon (;) in the following format: www.mydomain.com=keyvalueforthedomain;otherdomain.com=keyvalueforthedomain;
Large view scale:	The scale value for the large preview, e.g. when displaying multiple locations.
Detailed view scale:	Scale value for the zoomed view for appropriate location.
Width:	Width parameter of the map area.
Height:	Height parameter of the map area.

#### Kentico CMS 4.1 - Web Parts Reference

Default latitude:	Default latitude to set the middle point of large view.
Default longitude:	Default longitude to set the middle point of large view.
Latitude field:	The name of the latitude source field in the document type.
Longitude field:	The name of the longitude source field in the document type.
Tooltip field:	Text which should be displayed in the tool-tip.
Show map type selection	n:Indicates if the map type control should be displayed.
Show zoom control:	Indicates if the zoom control should be displayed.
Show map overview:	Indicates if the overview control should be displayed.
Show map overview:	Indicates if the overview control should be displayed.

Please note that you need to generate a google maps key for your domain. For more details please see <u>Sign Up for</u> the Google Maps API.

# Listings and viewers > Repeater

#### Content

Path:	Path of the documents to be displayed.
Data source name:	ID of data source web part that provides data displayed by this web part.
Content filter	
Document types:	Types of documents that should be displayed, separated with a semicolon

Document types:	(;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Select top N documents:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter out duplicate documents:	If the displayed data contains multiple links to the same document, you can choose to display only one of them.
Filter name:	Filter name of external filter connected to this web part.

## Transformations

Transformation:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Selected item transformation:	Transformation used in the detail view mode.
Item separator:	Item separator displayed between records.
Nested controls ID:	Sets the nested controls IDs. Use ';' as a separator; Example: myRepeaterID;myDatalistID;myRepeaterID2. This property replaces the previously used NestedRepeaterID and NestedDataListID properties. If you are still using these properties, no changes to functionality will occur, but it is advisable to rewrite your code to use the new property instead. If you need to dynamically set properties of a nested control, you have to set its

DelayedLoading property to 'True'. Please note that this setting can cause problems with ViewState.

## Paging

Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Navigation buttons:	Indicates if back/next buttons should be displayed.
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last buttons:	Indicates if First and Last buttons should be displayed.
HTML before:	HTML code before the results summary text.
HTML after:	HTML code after the results summary text.
Results position:	Position of the results summary text.
Numbers separator:	HTML code between the page numbers.

## Relationships

Main document:	Document for which you want to display its related documents.
Main document is on the left side:	Indicates if the given document is on the left side of the relationship.
Relationship name:	Name of the relationship between documents.

## System settings

Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.
No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.
Editing buttons	
Editing buttons	
Show New button:	Indicates if the button for adding new items should be displayed in the editing mode when viewing the page.
New button text:	New button description text.
Show Edit and Delete buttons:	Indicates if edit and delete buttons should be automatically shown for each item in the editing mode

item in the editing mode.

Please note: you can find an example of datalist/repeater nesting in <u>CMSRepeater</u> chapter.

Select top N documents:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter out duplicate documents:	If the displayed data contains multiple links to the same document, you can choose to display only one of them.
Filter name:	Filter name of external filter connected to this web part.
Transformations	
Transformation:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Selected item transformation:	Transformation used in the detail view mode.
Nested controls IDs:	Sets the nested controls IDs. Use ';' as a separator; Example: myRepeaterID;myDatalistID;myRepeaterID2. This property replaces the previously used NestedRepeaterID and NestedDataListID properties. If you are still using these properties, no changes to functionality will occur, but it is advisable to rewrite your code to use the new property instead. If you need

problems with ViewState.

to dynamically set properties of a nested control, you have to set its DelayedLoading property to 'True'. Please note that this setting can cause

Layout

## Kentico CMS 4.1 - Web Parts Reference

Repeat columns:	Number of columns displayed on the live site.
Repeat direction:	Direction in which the items should be displayed when more than one columns are used - either vertical or horizontal.
Repeat layout:	Layout of the control - either tables or flow layout (without any predefined structure).
Paging	
Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Navigation buttons:	Indicates is the back/next buttons should be displayed.
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last buttons:	Indicates if First and Last buttons should be displayed.
HTML before:	HTML content before the pager.
HTML after:	HTML content after the pager.
Results position:	Position of the results summary text.
Numbers separator:	Separator sign between the page numbers.
Relationships	
Main document:	Document for which you want to display its related documents.
Main document is on the left side:	Indicates if the given document is on the left side of the relationship.
Relationship name:	Name of the relationship between documents.
System settings	
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatic created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.

## No data behavior

Editing buttons	
No record found text:	Text that should be displayed if no data is found.
Hide if no record found:	Indicates if content should be hidden when no record is found.

Show New button:	Indicates if the button for adding new items should be displayed in the editing mode when viewing the page.
New button text:	New button description text.

Show edit and delete buttons: Indicates if edit and delete buttons should be automatically shown for each item in the editing mode.

You can find an example of datalist/repeater nesting in CMSRepeater chapter.

# Listings and viewers > XSLT viewer

Page separator:	HTML code inserted between page numbers.

### Security

Check permissions:

Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.

### System settings

Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.

This web part can be used for displaying long text split into several articles or displaying a "Take a tour" wizards.

## Listings and viewers > Random document

### Your second news

1/15/2008

Here you can enter the summary of the news item. You can use WYSIWYG editor to format the text, insert links and images. The summary will be used in The Random document web part selects a random documents from given location and displays them using specified transformation.

### Content

Path:

Path of the documents to be displayed.

### **Content filter**

Document type:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
Order by:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Random N:	Number of random documents to be displayed.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.

### Transformations

Transformation name:	Transformation used in the list view mode.
----------------------	--

### No data behaviour

Hide if no record found:	Indicates whether control should be hidden if no data found
No record found text:	Text that should be displayed if no data is found.

### Cache

Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.

You need to define the set of documents from which you want to choose the random document by setting the Path property to e.g. **/Products/%** and setting the Document type property e.g. to **cms.product**. The document will be displayed using the transformation specified in the Transformation name value - e.g. **cms.product.preview**.

## Listings and viewers > Lightbox

#### Content

Path:

Path of the documents to be displayed.

### **Content filter**

Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Select top N documents:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter out duplicate documents:	If the displayed data contains multiple links to the same document, you can choose to display only one of them.
Transformations	
Transformation:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Selected item transformation:	Transformation used in the detail view mode.
Item separator:	Item separator displayed between records.
Nested controls ID:	Sets the nested controls IDs. Use ';' as a separator; Example: myRepeaterID;myDatalistID;myRepeaterID2. This property replaces the previously used NestedRepeaterID and NestedDataListID properties. If you are still using these properties, no changes to functionality will occur, but it is advisable to rewrite your code to use the new property instead. If you need to dynamically set properties of a nested control, you have to set its DelayedLoading property to 'True'. Please note that this setting can cause problems with ViewState.

Paging

Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last buttons:	Indicates if First and Last buttons should be displayed.

### Relationships

Main document:	Document for which you want to display its related documents.
Main document is on the left side:	Indicates if the given document is on the left side of the relationship.
Relationship name:	Name of the relationship between documents.

Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.

### No data behavior

Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

### LightBox Configuration

Allways visible navigation buttons:	Indicates whether the navigation buttons are always visible, not only on mouse over.
Frame width:	Width of lightbox frame.
Frame height:	Height of lightbox frame.
Path to external CSS file:	URL path to the external CSS file needed by Lightbox.
Overlay opacity:	Transparency of the background (0 - transparent, 1 - dark).
Animate:	Indicates if the animation should be enabled or not.
Load delay:	Load delay time (in milliseconds). If you are using automatic resizing, this value indicates how long will be lightbox wait for taking element size. If you have problem with displaying of lightbox content, try use upper value.
Resize speed:	You can choose the speed of the resizing images from 1 (slowest) to 10 (fastest).
Border size:	Size of the image border.
Loading image:	Image displayed during lightbox loading.
Close button image:	Close button image.

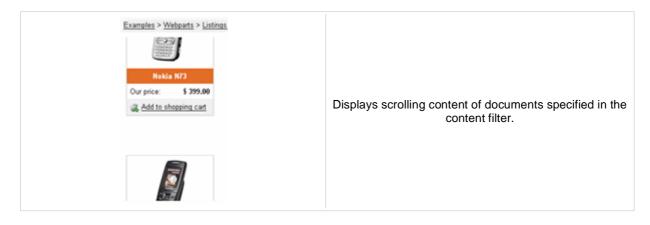

Previous button image: Previous button image.

Next button image: Next button image.

When writing a custom transformation for the Lightbox web part, it is necessary to use the 'rel' and 'rev' parameters as highlighted in the transformation code below. The 'title' parameter is used to determine the description of the image displayed in the lightbox.

```
<a href="<%# GetDocumentUrl() %>" rel="lightbox[group]" rev="<%# Eval
("NodeAliasPath") %>" title="<%# Eval("FileDescription") %>"><img src="<%#
GetFileUrl("FileAttachment") %>?maxsidesize=150" alt="<%# Eval("FileName") %
>" /></a>
```

### Content

Path:

Path of the documents to be displayed.

### **Content filter**

Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Select top N documents:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter out duplicate documents:	If the displayed data contains multiple links to the same document, you can choose to display only one of them.
Transformations	
Transformation:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Item separator:	Item separator displayed between records.
Nested controls ID:	Sets the nested controls IDs. Use ';' as a separator; Example: myRepeaterID;myDatalistID;myRepeaterID2. This property replaces the previously used NestedRepeaterID and NestedDataListID properties. If you are still using these properties, no changes to functionality will occur, but it is advisable to rewrite your code to use the new property instead. If you need to dynamically set properties of a nested control, you have to set its DelayedLoading property to 'True'. Please note that this setting can cause problems with ViewState.

### Relationships

Main document:	Document for which you want to display its related documents.
Main document is on the left side:	Indicates if the given document is on the left side of the relationship.
Relationship name:	Name of the relationship between documents.
System settings	Indicates if permissions abould be abacked for the displayed content and
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.
No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.
Div options	
Width (px):	Width of the scrolling text area.
Height (px):	Height of the scrolling text area.
Style:	Style assigned to the DIV tag of the area.
JavaScript options	
Scroll move time (milliseconds):	Time in milliseconds for text scrolling.
Script stop time (milliseconds):	Time in milliseconds for which should be the text stopped.
Direction:	Scrolling direction.
Stop on mouse over:	If checked, scrolling stops when the user mouse-overs the web part.

Please note: you can find an example of datalist/repeater nesting in <u>CMSRepeater</u> chapter.

## Listings and viewers > Basic repeater

### Content

Data source name: ID of data source web part that provides data displayed by this web part.

### Transformations

Transformation name:	Transformation used in the list view mode.
Alternating transformation name:	Transformation used in the list view mode for even items.
Item separator transformation name:	Transformation used for the separator.
Header transformation name:	Transformation used for the header.
Footer transformation name:	Transformation used for the footer.
Selected item transformation:	Transformation used in the detail view mode.
Selected item header transformation	: Sets the header transformation for selected item
Selected item footer transformation:	Sets the footer transformation for selected item

### No data behavior

Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

Note: Selected transformations work only with Documents datasource.

## Listings and viewers > Basic datalist

### Content

Data source name: ID of data source web part that provides data displayed by this web part.

### Transformations

Transformation name:	Transformation used in the list view mode.
Alternating transformation name:	Transformation used in the list view mode for even items.
Item separator transformation name:	Transformation used for the separator.
Header transformation name:	Transformation used for the header.
Footer transformation name:	Transformation used for the footer.
Selected item transformation name:	The transformation for the selected item in the datalist.
Selected item header transformation	: Sets the header transformation for selected item
Selected item footer transformation:	Sets the footer transformation for selected item

### Layout

Repeat columns:	Number of columns displayed on the live site.
Repeat direction:	Direction in which the items should be displayed when more than one columns are used - either vertical or horizontal.
Repeat layout:	Layout of the control - either tables or flow layout (without any predefined structure).
No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
Hide if no record found: No record found text:	Indicates if content should be hidden when no record is found. Text that should be displayed if no data is found.

Note: Selected transformations work only with Documents datasource.

## Listings and viewers > Universal pager

 $\underline{|\leq \leq 1} \ \underline{2} \ \underline{\geq >|}$  Results 1 - 9 of 16

Universal pager that can be connected to a web part displaying data(typically Basic datalist, Basic repeater, ...) and placed anywhere on the page, independently of the repeater.

#### **Pager properties**

Target control name:	Gets or sets the ID of webpart which should be paged.
Page size:	Sets the number of records to display on a page.
Paging mode:	Indicates whether pager use querystring parameter or postback.
Querystring key:	Sets querystring parameter.
Group size:	Sets the number of pages displayed for current page range.
Display first & last automatically:	If checked, first and last buttons of the pager will be displayed only where usable.
Display previous & next automatically:	If checked, previous and next buttons of the pager will be displayed only where usable.
Hide pager for single page:	Sets the value that indicates whether pager should be hidden for single page
Design	
Pages transformation:	Sets transformation for page links. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval ("PageLink") %> to get page link.
Current page transformation:	Sets the current page transformation. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval("PageLink") %> to get page link.
Page separator transformation:	Sets transformation for separator of page links.
First page transformation:	Sets transformation for link to the first page. Use <%# Eval("FirstURL") %> to get link to the first page.
Last page transformation:	Sets transformation for link to the last page. Use <%# Eval("LastURL") %> to get link to the last page.
Previous page transformation:	Sets transformation for link to the previous page. Use <%# Eval ("PreviousURL") %> to get link to the previous page.
Next page transformation:	Sets transformation for link to the next page. Use <%# Eval("NextURL") %> to get link to the next page. Sets transformation for link to the previous group of pages. Use <%# Eval ("PreviousGroupURL") %> to get link to the previous group.
Previous group transformation:	
Next group transformation:	Sets transformation for link to the next group of pages. Use <%# Eval ("NextGroupURL") %> to get link to the next group.
Layout	

Pager layout transformation: Sets transformation for overall pager layout.

# Listings and viewers > Page views

Page views: 16	Simple web part displaying number of views of the page on that it is placed.
Misc	

Message text:	Text to be displayed. The {0} macro is used for page views count.
Statistics type:	Interval for that the page views will be calculated.

## Listings and viewers > Universal document viewer

### Content

Path:	Path of the documents to be displayed.
Repeater	
Transformation name:	Sets the transformation name
AlternatingItem Transformation Name (only ASCX):	Transformation used in the list view mode for even items.

Selected item transformation (only ASCX):	Transformation used in the detail view mode.

### **Content filter**

Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
Order By:	Sets order by condition
Select only published:	documentation.webpartproperties.selectonlypublished
Top N:	Sets the top n pots
Top N: Site name:	Sets the top n pots Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
Site name: Where condition:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site. Sets where condition

### No data behaviour

Hide if no record found: Inc	dicates if content should be hidden when no record is found.

No record found text:

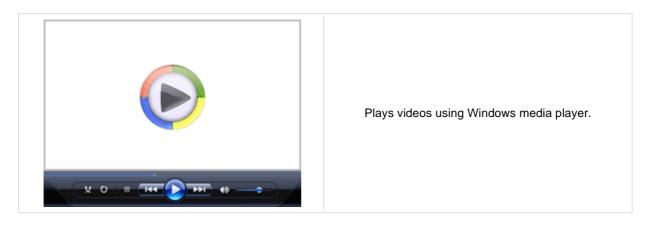

Paging	
Enable paging:	Indicates if displayed data should be paged.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Navigation buttons:	Indicates if back/next buttons should be displayed.
Pager position:	Position of the pager - top or bottom
Page size:	Number of records per page.
Query string key:	The name of the URL parameter that will contain the current page number.
Show first and last buttons:	Indicates if First and Last buttons should be displayed.
HTML before:	HTML code before the results summary text.
HTML after:	HTML code after the results summary text.
Results position:	Position of the results summary text.
Numbers separator:	HTML code between the page numbers.

Text that should be displayed if no data is found.

### Relationships

Main document:	Document for which you want to display its related documents.
Main document is on the left side:	Indicates if the given document is on the left side of the relationship.
Relationship name:	Name of the relationship between documents.
System settings	
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used. List of the cache keys on which the cached data depend. When the cache
Cache dependencies:	item changes, the cache of the web part is also deleted. Each line contains one item.

## Media > WMP video

### Video properties

Video URL:	URL of the video file.
Width (px):	Width of the video screen.
Height (px):	Height of the video screen.
Autostart:	Indicates if the video should be played automatically after the page load or not.
Show controls:	Indicates if the controls (play, pause, etc.) should be displayed.
Loop:	Indicates if the video should loop.
Automatically activate the object:	Indicates if the object should be automatically activated. The 'Click to activate' message is not shown.

## Media > Flash

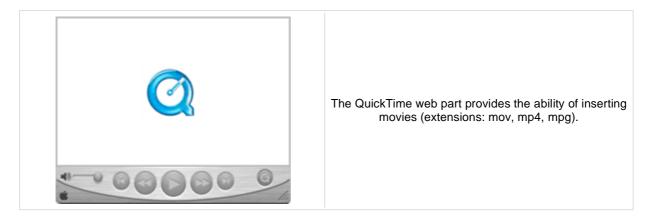

The Flash web part provides the ability of inserting flash.

### **Flash Properties**

Flash URL:	URL of the flash file.
Width (px):	Width of the flash file area.
Height (px):	Height of the flash file area.
Quality:	Select the quality of the streamed flash.
Scale:	You can choose in which scale should be the flash displayed.
Auto start play:	Idicates if the flash should be played automatically after page load or not.
Loop:	Indicates if the flash should repeat playing.
Automatically activate the object:	Indicates if the object should be automatically activated. The 'Click to activate' message is not shown.

## Media > Quick time

### **Video properties**

Video URL:	URL of the video file.
Width (px):	Width of the video screen.
Height (px):	Height of the video screen.
Autostart:	Indicates if the video should be played automatically after the page load or not.
Show controls:	Indicates if the controls (play, pause, etc.) should be displayed.
Loop:	Indicates if the video should loop.
Automatically activate the object:	Indicates if the object should be automatically activated. The 'Click to activate' message is not shown.
	5

## Media > Real media

### **Video properties**

Video URL:	URL of the video file.
Width (px):	Width of the video screen.
Height (px):	Height of the video screen.
Autostart:	Indicates if the video should be played automatically after the page load or not.
Show controls:	Indicates if the controls (play, pause, etc.) should be displayed.
Height of the control panel:	Height of the control panel.
Loop:	Indicates if the video should loop.
Automatically activate the object:	Indicates if the object should be automatically activated. The 'Click to activate' message is not shown.

### Content

Media library:	Media library that content should be displayed.
Path:	Path to folder within media library which will be used as root folder in folder tree.
Show subfolders content:	Indicates if subfolders content should be displayed.
Display file count:	Indicates if file count in directory should be displayed in folder tree.
Display active content:	Indicates if active content (video, flash etc.) should be displayed.
Preview suffix:	Preview suffix for identify file preview.
Icon set name:	Name of icon set used for file preview.
Hide folder tree:	Indicates if folder tree should be displayed.
Use secure links:	Indicates whether the links should point to the secure page. Permissions for displaying the media file are then checked if required by library settings.

### **Upload settings**

Allow upload:	Indicates if file upload form should be displayed.
Allow upload preview:	Indicates if preview file upload should be displayed in upload form.

### **Content transformations**

Transformation name:	Transformation used in the list view mode.
Selected item transformation:	Transformation used in the detail view mode.
Item separator transformation:	Transformation used for the separator.
Header transformation:	Transformation used for the header.
Footer transformation:	Transformation used for the footer.

### Filter settings

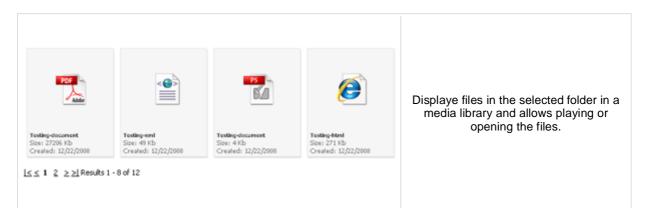

Filter method:	Indicates whether pager uses querystring parameter or postback.
Sort direction querystring key:	Name of sort by query parameter.
File id querystring key:	Name of file id query parameter.

Folder path querystring key:	Name of path query paramter.
Content filter	
Select top N files:	Selects only top N files. If blank, all files are selected.
Pager	
Page size:	Number of records per page.
Querystring key:	The name of the URL parameter that will contain the current page number.
Group size:	Sets the number of pages displayed for current page range.
Display first & last automatically:	If checked, first and last buttons of the pager will be displayed only where usable.
Display previous & next automatically:	If checked, previous and next buttons of the pager will be displayed only where usable.
Hide pager for single page:	Sets the value that indicates whether pager should be hidden for single page.
Pager design	
Pages:	Sets transformation for page links. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval ("PageLink") %> to get page link. Sets the current page transformation. Use <%# Eval("Page") %> to get
CurrentPage:	current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval("PageLink") %> to get page link.
Page separator:	Sets transformation for separator of page links.
First page:	Sets transformation for link to the first page. Use <%# Eval("FirstURL") %> to get link to the first page.
Last page:	Sets transformation for link to the last page. Use <%# Eval("LastURL") %> to get link to the last page.
Previous page:	Sets transformation for link to the previous page. Use <%# Eval ("PreviousURL") %> to get link to the previous page.
Next page:	Sets transformation for link to the next page. Use <%# Eval("NextURL") %> to get link to the next page.
Previous group:	Sets transformation for link to the previous group of pages. Use <%# Eval ("PreviousGroupURL") %> to get link to the previous group.
Next group:	Sets transformation for link to the next group of pages. Use <%# Eval ("NextGroupURL") %> to get link to the next group.
Pager layout:	Sets transformation for overall pager layout.
No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

# Media library > Media file uploader

File: Preview:	Browse Browse	Using this webpart you can upload files to the specified media library.
Library name:	Name of the media library where the	e files should be uploaded.
Destination path:	Destination path within the media library.	
Enable upload preview:	Indicates if file preview uploader should be displayed.	
Preview suffix:	Preview suffix for indentification of preview file.	

## Media library > Media gallery - file list

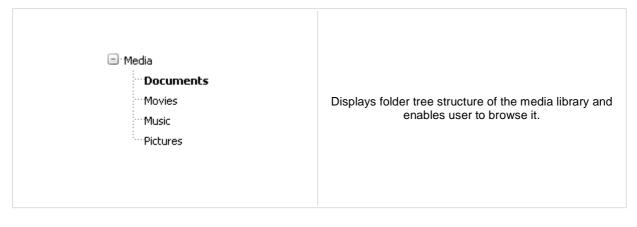

### Content

Media library:	Content of this media library will be displayed by the web part.
Data source name:	ID of data source web part that provides data displayed by this web part.
Display active content:	Indicates if active content (video, flash etc.) should be displayed.
File id querystring key:	Sets querystring parameter for file id value.
Preview suffix:	Preview suffix for identify file preview.
Icon set name:	Name of icon set used for file preview.

### **Content transformations**

Transformation name:	Transformation used in the list view mode.
Selected item transformation:	Transformation used in the detail view mode.
Item separator transformation name:	Transformation used for the separator.
Header transformation name:	Transformation used for the header.
Footer transformation name:	Transformation used for the footer.

## Media library > Media gallery - folder tree

### Content

Media library:	Content of this media library will be displayed by the web part.
Path:	Content stored under this path within the media library will be displayed.
Display file count:	Indicates if file count in directory should be displayed in folder tree.
Filter method:	Indicates whether pager uses querystring parameter or postback.
Folder path querystring key:	Sets querystring parameter for folder path.
File ID querystring key:	Sets querystring parameter for file id value.
Filter:	Filter name of external filter connected to this web part.

# Media library > Media gallery - file filter

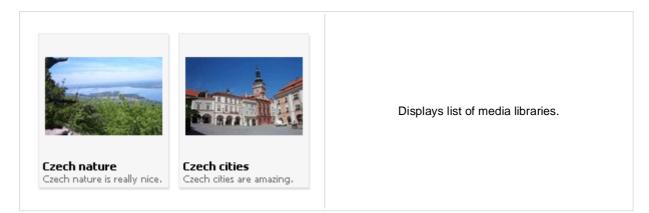

Sort	by:	<u>name</u>	<u>date</u>	<u>size</u>
------	-----	-------------	-------------	-------------

Enables sorting files in media gallery.

### Content

Filter method:	Indicates whether pager uses querystring parameter or postback.
Sort direction querystring key:	Sets querystring parameter for sort direction.
File ID querystring key:	Sets querystring parameter for file id value.

# Media library > Media libraries viewer

#### Repeater

Transformation Name:	Transformation used in the list view mode.
AlternatingItem Transformation Name:	Transformation used in the list view mode for even items.
Separator Transformation Name:	Transformation used for the separator.
Header Transformation Name:	Transformation used for the header.
Footer Transformation Name:	Transformation used for the footer.

#### No data behaviour

Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

#### Filter

Show group libraries:	Indicates if group libraries should be included.
ORDER BY condition:	ORDER BY part of the SELECT query.
Select Top N members:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Selected columns:	Only selected columns will be displayed.

#### Pager

Page size:	Number of records per page.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).
Querystring key:	The name of the URL parameter that will contain the current page number.
Group size:	Sets the number of pages displayed for current page range.
Display first & last automatically:	If checked, first and last buttons of the pager will be displayed only where usable.

Display previous & next automatically:	If checked, previous and next buttons of the pager will be displayed only where usable.
Hide pager for single page:	Sets the value that indicates whether pager should be hidden for single page.
Pager design	
Pages:	Sets transformation for page links. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval ("PageLink") %> to get page link.
CurrentPage:	Sets the current page transformation. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval("PageLink") %> to get page link.
Page separator:	Sets transformation for separator of page links.
First page:	Sets transformation for link to the first page. Use <%# Eval("FirstURL") %> to get link to the first page.
Last page:	Sets transformation for link to the last page. Use <%# Eval("LastURL") %> to get link to the last page.
Previous page:	Sets transformation for link to the previous page. Use <%# Eval ("PreviousURL") %> to get link to the previous page.

Next group:	Sets transformation for link to the next group of pages. Use <%# Eval ("NextGroupURL") %> to get link to the next group.
Pager layout:	Sets transformation for overall pager layout.
System settings	
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.

List of the cache keys on which the cached data depend. When the cache

item changes, the cache of the web part is also deleted. Each line contains

Cache dependencies:

Additional documentation text is not provided.

one item.

# Membership > Current user

Current user: Global Administrator (administrator)	Displays the user name and full name of the current user.
--	---

### **Display settings**

Show only when authenticated:	Indicates that this text should be displayed only for authenticated (non-public) user.
Show label text:	Indicates if user's label text should be shown.
Show user full name:	Indicates if user's full name should be shown.
Show user name:	Indicates if user's name should be shown.
Authenticated link URL:	Url of the link for authenticated user.
Public link URL:	Url of the link for public user.
Label text:	Displayed text of the label.
Label CSS class:	CSS class used for the label text.
User text CSS class:	CSS class used for the user name text.

# Membership > Sign out button

You can sign out using this button Sign out	Signs out the user and redirects her to the specified URL.
--	--

### Sign out button settings

Show as link:	If true the sign out button is shown as a link.
Button text for sign out:	Caption of the Sing Out button.
Redirect to URL:	URL of the page where the user should be redirected after she signs out. For example: ~/home.aspx
Show only when authenticated:	Indicates if the sign out button should be displayed only when the user is authenticated.
Skin ID:	Defines the ID of the skin

### Sign in button settings

Button text for sign in:	Caption of the Sing In button.
Sign in page path:	Path of the page where the user should be redirected to sign in.
Return page path:	Path of the page where the user is redirected after logon.

# Membership > Logon form

User name:	
Remember me	
Log on	Form to login to the secured website area.
Forgotten password	
Your user name or e-mail:	
Send password	

### Logon form settings

Default target URL:	URL of the page where the user should be redirected if no redirection URL is passed through the ReturnUrl querystring parameter. For example: ~/clientportal.aspx
Skin ID:	Defines the ID of the skin
Logon failure text:	Text displayed to the user if the authentication fails. For example: Wrong password.
Allow forgotten password retrieval:	Indicates if the forgotten password can be retrieved by e-mail.
Send email from:	The e-mail address from which the password will be sent. For Example: <u>mymail@gmail.com</u>

# Membership > Registration form

First name:	This form allows the visitor to register as a user to the site.
Password confirmation: Register	

### **Registration form settings**

Assign user to roles:	List of role code names the user should be assigned to, separated with a semicolon (;). For example: CMSPublicUsers;CMSEditor If you enter some site here, users will be automatically assigned to the site
Assign to sites:	after registration.
Redirect to URL:	URL of the page where the user should be redirected after she successfully registers in. For example: ~/clientportal.aspx
Display captcha image:	Indicates whether the captcha image should be displayed.
Starting alias path:	Alias path where user is redirected to after successful login.

### Extended settings

•	
Enable user after registration:	Indicates if the user account is enabled immediately after the registration. You can turn this option off if you want the registered user to be approved by the administrator.
Send welcome e-mail:	Indicates whether welcome email to user should be sent.
Notify administrator about new registrations:	Indicates if an e-mail should be sent to the administrator. If administrator's approval is not required, the e-mail is sent to the administrator using the "New registration" e-mail template. If administrator's approval is required, the e-mail is sent to the administrator using the "Registration approval" e-mail template.
From e-mail address:	E-mail address from which the e-mail notifications will be sent.
To e-mail address:	E-mail address to which the e-mail notifications will be sent.
Display message after registration:	Text that will be displayed to the newly registered user, informing him/her that the account needs to be approved by the administrator. For example: "Thank you for your registration. Your user account needs to be approved by the administrator now."
E-mail confirmation page:	Page where user will confirm his email address.
Password min. length:	Sets the minimal password length.
l abel text settings	

#### Label text settings

First name text:	Label for the First name field.
Last name text:	Label for the Last name field.
E-mail text:	Label for the E-mail field.
Password text:	Label for the Password field.
Confirmation password text:	Label for the Confirm password field.

### Message board > Message board

Global Administrator Your URL: http:// Your e-mail:	
admin@mydomainXY.com Message:	Displays the list of the messages with the
	dialog to add a new message to the board. Board is either public or owned by the user.
Enter security code: 666533 Add	

### Display

Message transformation:	Transformation used in the list view mode.
Enable edit:	Indicates whether the message EDIT button should be displayed.
Enable delete:	Indicates whether the message DELETE button should be displayed.
Enable approve:	Indicates whether the message APPROVE button should be displayed.
Enable reject:	Indicates whether the message REJECT button should be displayed.
No messages text:	The text displayed by message board when no message is found.

### Board default settings - THESE SETTINGS ARE APPLIED ONLY TO NEW BOARDS!

Display name:	Board display name. You can also use macros for the name. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Message board owner:	Specifies the owner of newly created message board. This property cannot be changed once the board is created.
Access:	Specifies the message board security access level. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Authorized roles:	Default roles authorized for the newly created message board. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Moderators:	Default moderators for the newly created message board. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Moderated:	Indicates whether the board is moderated or not. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Require e-mail addresses:	Indicates whether the board message requires e-mail address. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Use security code:	Indicates whether the board uses the security CAPTCHA feature. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Open:	Indicates whether the board is opened. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Open from:	Board opening date. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.
Open to:	Board closing date. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards.

#### Kentico CMS 4.1 - Web Parts Reference

Enable subscriptions:	Indicates whether the subscription feature should be enabled. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards. URL of the page used to unsubscribe from the subscribed message board. If it is not specified, default unsubscription URL from SiteManager ->
Unsubscription URL:	Settings is used. This property is only applied when the first message is posted. You can later change the properties in CMS Desk -> Tools -> Message boards. URL used as the URL base of links to message boards in notification e-
Board base URL:	mails. If empty, value from Site Manager -> Settings -> Message boards -> Board base URL will be used. If that property is empty too, message boards can not be placed on pages with wildcard URLs.
Content rating	
Enable content rating:	Enables content rating feature.
Rating type:	Specifies the type of content rating control.
Max rating value:	Specifies the maximum content rating value available.
Security	
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Enable anonymous read:	Indicates whether the anonymous read is enabled

# Message board > Message board viewer

David         We are proud to announce that our group has already two members!         11/20/2008 3:21:17 PM    Displays the list of messages from all messages boards on the specified site according to the given WHERE condition.
--

#### Repeater

Transformation name:	Sets the transformation name.
AlternatingItem Transformation Name:	Transformation used in the list view mode for even items.
Separator Transformation Name:	Transformation used for the separator.
Header Transformation Name:	Transformation used for the header.
Footer Transformation Name:	Transformation used for the footer.

#### Filter

Filter name:	Filter name of external filter connected to this web part.
Display only approved:	Indicates if only approved items should be selected.
Top N:	Selects top N items.
Order By:	Sets ORDER BY condition.
Site name:	Name of the site from which the messages should be displayed.
Where condition:	Sets WHERE condition.
Selected columns:	Only selected columns will be displayed.

#### No data behaviour

Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

### Pager

Hide pager for single page:	Sets the value that indicates whether pager should be hidden for single page.
Page size:	Number of records per page.
Group size:	Sets the number of pages displayed for current page range.
Paging mode:	Type of paging parameter - it can be passed either through URL (Query string) or through postback (Postback).

#### Kentico CMS 4.1 - Web Parts Reference

Querystring key:	The name of the URL parameter that will contain the current page number.
Display first & last automatically:	If checked, first and last buttons of the pager will be displayed only where usable.
Display previous & next automatically:	If checked, previous and next buttons of the pager will be displayed only where usable.
Pager design	
Pages:	Sets transformation for page links. Use <%# Eval("Page") %> to get current page number, <%# Eval("PageURL") %> to get page URL or <%# Eval ("PageLink") %> to get page link.

New message link URL:	URL to the page where Send message web part is located.
New message label:	Label which will be used for 'New message' link. Leave blank if you want to use default value.
Link separator:	Text separator which will be used between links.

### Navigation > Drop-down menu

The Drop-down menu web part displays a menu including sub-menus that open on mouse-over. It uses JavaScript, tables and it can be designed using CSS styles. You can choose between horizontal and vertical layout.

#### Content

Path:	Path of the documents to be displayed.
Highlighted document path:	Path of the item that will be highlighted like it was selected.
Content filter	
Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter name:	Filter name of external filter connected to this web part.
Design	
CSS prefix:	Prefix used for CSS class names. This property allows you to set up different CSS styles for particular menu levels.
Cursor:	Type of the cursor displayed when the user mouse-overs the menu.
Highlight all items in path:	Indicates if the highlighted item should be displayed as a link.
External script path:	Path of the CMSMenu JavaScript file. You will use it only if want to use a customized JavaScript file.
Layout:	Menu layout - horizontal or vertical.
Render item name:	Indicates if item names should be rendered in the HTML code.
Render image alt:	Indicates if ALT attribute should be rendered for images used in the menu (for XHTML compatibility).
Padding:	Padding of the menu table element.
Spacing:	Spacing of the menu table element.

#### Kentico CMS 4.1 - Web Parts Reference

Submenu indicator image:	Path of the image that should be used as a sub-menu indicator for menu items that contain sub-items.
Use alternating styles:	Indicates if odd and even items should have different styles.
Use item images for higlighted item:	Indicates if highlighted images is not specified, use item image if exist.
Apply menu design:	Indicates if the CSS styles from document settings should be used.
Enable RTL behaviour:	Indicates if the multilingual support should be enabled or not.
Enable mouse up/down class:	Indicates if the menu should render different CSS classes for mouse-up and mouse-down events.
Word wrap:	Indicates if the words should be wrapped or not.
Encode menu caption:	Indicates if menu caption should be HTML encoded.

#### Menu item separator

Separator CSS class:	CSS class of the separator cell (TD element).
Separator height:	Height of the separator between menu items.
Separator text:	Text of the separator rendered between menu items of the first menu level.
No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
ZeroRowsText:	Text that should be displayed if no data is found.
System settings	
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used. List of the cache keys on which the cached data depend. When the cache
Cache dependencies:	item changes, the cache of the web part is also deleted. Each line contains

	Tree menu	
	Tree view	

#### Content

Path of the documents to be displayed.
Alias path of the node that should be selected in the menu. If you do not specify any value, the current path is used.
Types of documents that should be displayed, separated with a semicolon (;).
Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture version of the displayed content.
Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY part of the SELECT query.
Indicates if only published documents should be displayed.
Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE part of the SELECT query.
Filter name of external filter connected to this web part.
Indicates whether the item id prefix is set up automatically with according to control client id. If this property is true, the property ItemIdPrefix has no effect.
Prefix placed before each item ID. You can use it to keep ID's unique if you have several Tree Menus menu web parts on the same page.
Cell padding of the table representing menu.
Cell spacing of the table representing menu.
Indicates if the selected section of menu should be collapsed when it's clicked.
Prefix used for CSS class names. This property allows you to set up different CSS styles for particular menu levels.
Indicates if the highlighted item should be displayed as a link.
Indicates if indentation spaces should be generated inside hyperlink (true) or outside (false). This applies only when you do not use images in the menu.
Indicates if only one outer link should be generated per each menu item.

#### Kentico CMS 4.1 - Web Parts Reference

Generate all sub-items:	Indicates whether full menu should be generated.	
Highlight all items in path:	Indicates if all items in the currently selected path should be displayed as highlighted.	
Indentation:	Indentation of menu item levels. Number of spaces that will be placed before each level of menu items.	
Item image url:	URL address of the image that is displayed next to menu items. It may start with "~/" representing the virtual path of the current application.	
Open item image url:	URL address of the image that is displayed next to open menu items. It may start with "~/" representing the virtual path of the current application.	
OnMouseOut script:	OnMouseOutScript script for menu items. You can use macro expressions here.	
OnMouseOver script:	OnMouseOver script for menu items. You can use macro expressions here.	
Sub-menu indicator image:	URL of the image indicating the current menu item has sub-items.	
Target frame:	Target frame (window name) of the breadcrumb links.	
Use alternating styles:	Indicates if odd and even items should have different styles.	
Use item images for higlighted item:	This indicates whether images for highlighted items should be used.	
Apply menu design:	This indicates whether design from Properties -> Menu should be applied.	
Render image alt:	Indicates if ALT attribute should be rendered for images used in the menu (for XHTML compatibility).	
Render link title:	If true, renders the accessibility title attribute.	
Render sub items:	Indicates whether under the selected item should be rendered (visible) sul items.	
Word wrap:	Indicates if the words in menu should be wrapped or not.	
Encode menu caption:	Indicates if menu caption should be HTML encoded.	
No data behavior		
Hide if no record found:	Indicates if content should be hidden when no record is found.

# **Navigation > Breadcrumbs**

nhe woh part displays the current
nbs web part displays the current sitor on the site, such as Products >
Computers.

Ooment		
Selected path:	Path of the documents to be displayed.	
Default path:	Default path of the document that should be displayed in the breadcrumbs if no path is provided from the page context. For example: /home Starting path from which the breadcrumbs should be displayed. If you set this value to /home and go to /home/news/2006, the breadcrumbs will display News -> 2006 (without Home > at the beginning).	
Starting path:		
Document types:	Types of documents that should be displayed, separated with a semicolon (;).	
Content filter		
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.	
Culture code:	Culture version of the displayed content.	
Select only published:	Indicates if only published documents should be displayed.	
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.	
Where condition:	WHERE part of the SELECT query.	
Filter name:	Filter name of external filter connected to this web part.	
Design		
Breadcrumb separator:	Character(s) used as a separator between bread crumbs. For example: > (for >)  > (for ->) <img src="/images/myseparator.gif"/>	
Breadcrumb separator RTL:	The same as for Breadcrumb separator, but for the right-to-left languages.	
Show current item:	Indicates if the current item should be displayed.	
Show current item as a link:	Indicates if the current item should be displayed as a link.	
Target frame:	Target frame (window name) of the breadcrumb links. For example: _blank	
Apply menu design:	Indicates that the desing of the menu should be applied	
Render link title:	If true, renders the accessibility title attribute.	
Use RTL behaviour:	When selected the Bredcrumbs change it's behaviour from LTR to RTL (right-to-left culture)	
Ignore Show in navigation:	The document value ShowInNavigation is ignored if this property is true.	
Encode name:	Indicates whether the link name should be encoded	

No data behavior	
Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.
System settings	
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter name:	Filter name of external filter connected to this web part.
Node settings	

Root text:	Text of the root node item.
Root image url:	URL of the image used for the root node.
Node image url:	URL of the image used for the nodes.

# **Behavior**

Fix broken lines:	Indicates whether treeview can try fix broken lines.
Dynamic behavior:	Enable populate on demand and load child nodes dynamically.
Expand current path:	Idnicates if the current path should be expanded when visitor comes to some sub-page.
OnClick action:	Javascript action when clicking on item.
Expand all nodes on startup:	Indicates if all nodes should be expanded on the page load.

Expand sub-tree:	Indicates whether subtree under current item is expanded
Inactive root node:	Indicates if the root should be clickable or not.
Inactive node image:	Indicates if the node image be enabled or not.
Inactivate selected item:	Indicates if the selected item should be clickable or not.
Inactivate all items in path:	Indicates if all items in the path should be clickable or not.
Hide root node:	Indicates whether root node is hidden
Use doc-type images:	Displays to each item appropriate document type image.
Higlight selected item:	Indicates if the selected item should be highlighted.
Ignore document menu action:	Ignores the menu action settings for this document.
Target:	Specifies target frame for all links.
Encode menu caption:	Indicates if menu caption should be HTML encoded.

# Design

Item style:	CSS style of the items in the menu.
Item class:	CSS class of the items in menu.
Selected item style:	CSS style of the selected item.
Selected item class:	CSS class of the selected item.
Collapse image URL:	URL of the image which should be displayed when node is collapsed.
Expand image URL:	URL of the image which should be displayed when node is expanded.
Word wrap:	Indicates if the words in menu should be wrapped or not.
Inactive item class:	CSS class of the inactive item.
Inactive item style:	CSS style of the inactive item.
SkinID:	ID of a skin that should be applied .
Show lines:	Indicating whether lines connecting child nodes to parent nodes are displayed.
Collapse image ToolTip:	ToolTip for the image that is displayed for the collapsible node indicator.
Expand image ToolTip:	ToolTip for the image that is displayed for the expandable node indicator.

## No data behavior

System settings	
No record found text:	Text that should be displayed if no data is found.

## Content

Path:

Path of the documents to be displayed.

# **Content filter**

Document types:	Types of documents that should be displayed, separated with a semicolon (;).
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Culture code:	Culture version of the displayed content.
Maximum nesting level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.
ORDER BY expression:	ORDER BY part of the SELECT query.
Select only published:	Indicates if only published documents should be displayed.
Select top N documents:	Selects only top N items. If blank, all items are selected.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
WHERE condition:	WHERE part of the SELECT query.
Filter out duplicate documents:	If the displayed data contains multiple links to the same document, you can choose to display only one of them.
Transformations	
Transformation:	Transformation used in the list view mode.
Alternating transformation:	Transformation used in the list view mode for even items.
Item separator:	Item separator displayed between records.
Nested controls ID:	Sets the nested controls IDs. Use ';' as a separator; Example: myRepeaterID;myDatalistID;myRepeaterID2. This property replaces the previously used NestedRepeaterID and NestedDataListID properties. If you are still using these properties, no changes to functionality will occur, but it is advisable to rewrite your code to use the new property instead. If you need to dynamically set properties of a nested control, you have to set its DelayedLoading property to 'True'. Please note that this setting can cause problems with ViewState.

## Relationships

Main document:	Document for which you want to display its related documents.	
Main document is on the left side:	Indicates if the given document is on the left side of the relationship.	
Relationship name:	Name of the relationship between documents.	
System settings		
Check permissions:	Indicates if permissions should be checked for the displayed content and only the documents for which the current user has the "read" permission should be displayed.	
Cache item name:	Name of the cache item. If not explicitly specified, the name is automatically created based on the control unique ID.	
Cache minutes:	The number of minutes for which the content is kept in the cache until the latest version is reloaded from the database. If you specify 0, the content is not cached. If you specify -1, the site-level settings are used.	
Cache dependencies:	List of the cache keys on which the cached data depend. When the cache item changes, the cache of the web part is also deleted. Each line contains one item.	
No data behavior		
Hide if no record found:	Indicates if content should be hidden when no record is found.	
No record found text:	Text that should be displayed if no data is found.	
Div options		
Width (px):	Width of the scrolling text area.	
Height (px):	Height of the scrolling text area.	
Style:	Style assigned to the DIV tag of the area.	
JavaScript options		
Scroll move time (milliseconds):	Time in milliseconds for text scrolling.	
Script stop time (milliseconds):	Time in milliseconds for which should be the text stopped.	
Direction:	Scrolling direction.	
Stop on mouse over:	If checked, scrolling stops when the user mouse-overs the web part.

# **Notifications > Notification subscription**

Subscribe for new product notification: E-mail: Subscribe	Using this webpart any user can subscribe to the notifications via any gateway of the chosen event.
---	---

#### **Event settings** Localizable string or plain text which describes event and which is visible to Event display name: the users. Event description: Text which will be displayed above the notification gateway forms. Source of the event. With this field you can distinguish between the places Event source: where the event was fired. For example document actions (insert, update, delete) use "Content" as a source. Event code: Code of the event. Event object ID: Event object ID (can be entered as macro, for example ). Custom event data which are stored in the subscription record. You can use Event data 1: them via macros in the gateway template. Custom event data which are stored in the subscription record. You can use Event data 2: them via macros in the gateway template. Notification settings Determines whether the users are subscribed to site specific event or global Site name: event. Gateway names: Gateway codenames separated with semicolon. Notification template name: Name of the template to use. Notification preffered format: Preferred format of the subscription text.

# **Notifications > Content subscription**

Subscribe for new product notification:	Using this webpart any user can subscribe to the e-mail
E-mail: administrator@mydomain.	notifications about document events (insert, update,
Subscribe	delete).

## **Event settings**

Site name:	Determines whether the users are subscribed to site specific event or global event.
Path:	Path to the documents.
Document types:	Document types which should be included.
Event description:	Text which will be displayed to users in the subscription form.
Notification settings	
Gateway names:	Gateway codenames separated by semicolon.

Notification preffered format: Preffered format of the notification e-mail. If e-mail gateway supports both formats and e-mail templates for both formats are specified notification e-mail format is set to the preffered one.

## **Create document**

Create event enabled:	Indicates if user should be subscribed to the event which is raised after the specified documents are created.
Create event display name:	Localizable string or plain text which describes CREATE event and which is visible to the users.
Create event template name:	Name of the template to use for CREATE event.

## **Update document**

Update event enabled:	Indicates if user should be subscribed to the event which is raised after the specified documents are updated.
Update event display name:	Localizable string or plain text which describes UPDATE event and which is visible to the users.
Update event template name:	Name of the template to use for UPDATE event.

#### **Delete document**

Delete event enabled:	Indicates if user should be subscribed to the event which is raised after the specified documents are deleted.
Delete event display name:	Localizable string or plain text which describes DELETE event and which is visible to the users.
Delete event template name:	Name of the template to use for DELETE event.

# Polls > Poll

Do you like our product? O Yes, I do.	
O No, I don't. O I don't know your product.	The Poll web part allows you to insert your own Poll on the page.

# **Poll settings**

Poll name:	Poll to be displayed. If you're using the ASPX templates, you need to use poll code name here.
Show graph:	Indicates if graph should be displayed before vote.
Count type:	Specifies the format of number of votes: - none - absolute - percentage
Show results after vote:	Indicates if results should be displayed after vote.
Button text:	Text displayed on the submit button. The default value is "Vote".
Check permissions:	Indicates if permissions for voting specified for the given poll should be checked.
Check if user voted:	Indicates if the the system should check whether the current user has previously voted. The system checks the uniqueness of the user by cookie stored on the client machine.
Hide to unauthorized users:	Hides the web part if the user is not authorized to vote.
Hide if closed:	Hides the web part if the poll is closed.

You can modify the design using standard CSS styles, skin file, or by modifying the **CMSWebParts\Polls\Poll.ascx** file. The styles are described in more detail in **Developer's Guide -> Modules - Polls -> Design and styles**.

#### General Packet Radio Service (GPRS)

General Packet Radio Service (GPRS) is a packet oriented Mobile Data Service available to users of Global System for Mobile Communications (GSM) and IS-136 mobile phones. It provides data rates from 56 up to 114 kbit/s.

GPRS can be used for services such as Wireless Application Protocol (WAP) access, Short Message Service (SMS), Multimedia Messaging Service (MMS), and for Internet communication services such as email and World Wide Web access. GPRS data transfer is typically charged per megabyte of traffic transferred, while data communication via traditional circuit switching is billed per minute of connection time, independent of whether the user actually is using the capacity or is in an idle state. GPRS is a best-effort packet switched service, as opposed to circuit switching, where a certain Quality of Service (QoS) is guaranteed during the connection for non-mobile users.

#### Search Engine Optimization (SEO)

Search engine optimization (SEO) is the process of improving the volume and quality of table to a web site from search engines var "natural" ("oppare" or "algorithms") search results for targeted layouties, to-layouties, the earlier as the spresented in the Dearch Engine Randal Tagges (ERSP3) or the tagle at "lawle", the none searchers will wait that site .5(2) can also target dimension tand the site including magnetizes search, local search, and induction.

As a matering stretegy to increasing a sters nervance, 350 considers here search algorithms used, and what peels reach the .500 offstis may induce a steric codes, presentation, and structure, as well as fixing publiess that could prevent search engine indicing programs from Mill sydeling atte. Another class of technologies, throom as tablick that 550 or spandexing, use methods such as link terms and layeved stuffing that tend to have search engine user experience. Same charth engines took for sites that employ these techniques and may remove them from their indices.

The initialism "SEO" can also refer to "search engine optimizers", terms adopted by an industry of consultants who carry out optimization projects on behalf of clients, and by employees who perform SEO services in-house. Displays list of all the tags used within a group of documents or part of the content tree. Tag frequency is shown with font size; the most frequent tags use larger font size than the less frequent ones. Each tag links to the page which shows the list of the documents that are tagged with the specified key word.

## Tag cloud settings

Tag group name:	Tag group which will be used as source of tags.
Document list URL:	URL of the document which will be used as a link URL for tags.
Querystring parameter name:	The name of the query string parameter which will pass the TagID to the page specified in DocumentListUrl property.
Tag separator:	HTML code which is placed between each two tags.
Minimal tag font size:	Minimal font size (for the tag with the lowest occurrence) in pixels.
Maximal tag font size:	Maximal font size (for the tag with the highest occurrence) in pixels.
Site name:	Code name of the web site from which you want to display the content. If you leave the value empty, the content is retrieved from the current web site.
Alias path:	Path of the documents to be displayed.
Culture code:	Culture version of the displayed content.
Combine with default culture:	Indicates if default language version of the document should be displayed if the document is not translated to the current language.
Select only published:	Indicates if only published documents should be displayed.
Max relative level:	Maximum nesting level. It specifies the number of sub-levels in the content tree that should be included in the displayed content.

## No data behavior

Hide if no record found:	Indicates if content should be hidden when no record is found.
No record found text:	Text that should be displayed if no data is found.

## Web service settings

Web service URL (.asmx file):	URL of the web service, e.g.:http://localhost/webservice1/Service.asmx
Web service parameters:	String value that is passed as a parameter to the web service.

The design of the grid can be customized using skins. Here's an example:

```
<ccl:CMSDataGrid Runat="server">
  <HeaderStyle Font-Bold="True" ForeColor="White" BackColor="orange"></HeaderStyle>
  <FooterStyle ForeColor="Black" BackColor="#CCCCCC"></FooterStyle>
  <ItemStyle ForeColor="Black" BackColor="#EEEEEE"></ItemStyle>
```

<AlternatingItemStyle BackColor="#DCDCDC"></AlternatingItemStyle>
<PagerStyle HorizontalAlign="Center" ForeColor="Black" BackColor="#999999"
Mode="NumericPages"/>

</ccl:CMSDataGrid>
