HotFix instructions

Version: 5.5 R2.3

Created: 01/03/2011

Table of Contents

Fixed bugs

The hotfix applies to the following bugs:

Bugs fixed in hotfix 5.5 R2.3

- Page templates - New template wasn't created correctly in special cases.

Bugs fixed in hotfix 5.5 R2.2

- Messaging - Actions were not hidden properly when an error occurred during sending a message.
- E-commerce - Product filter did not work correctly.
- Text - Editable image web part did not work correctly when application ran internally on a different port.
- Dialogs - WYSIWYG dialogs did not work properly when media library folder name contained special characters.

Bugs fixed in hotfix 5.5 R2.1

- Project management - Users and roles couldn't be deleted in special cases due to project or task dependencies.
- Documents - Linking to child documents wasn't working correctly when they were translated into multiple cultures.
- Workgroups - New forum groups created under a workgroup from the live site didn't have their base URL set correctly.
- The Field editor didn't allow macros to be inserted into the Default value textbox for non-text fields.
- Security - Moving the position of a document was allowed in special case even if the user didn't have the Modify permission.
- Workflow - Workflow e-mails were incorrectly sent to disabled users.
- Form controls - GUID type columns created in the Field editor were causing exceptions.
- Web analytics - The context help for the Registered users section was missing.
- Messaging - It was incorrectly possible to reply/forward a message with an empty message body.

Instructions

PLEASE NOTE:

This hotfix wasn't fully tested so you may experience other issues caused by this hotfix.

You should always backup your project and database before applying the hotfix.

Apply the hotfix by performing following tasks:

1. Backup your original project and database.
2. If an SQL script is available:
    a. Change the @cultureCode parameter in SQL script to your default UI culture code (only if your default UI culture is not „en-US")
    b. Run the SQL script on your database.
3. Copy & replace the files from CMS folder to your web project.
4. Copy & replace the files from Source folder to your project.
5. You may need to rebuild the solution in case you are using custom handlers or precompiled web site. You can optionally do that to verify that the web site can compile without any problems.
6. If you wish to use Quick links widgets (Department quick links, Workgroup quick links, Intranet quick links) on the Intranet Portal, please open the Site Manager, select Development -> Widgets, find the widget in the Intranet Portal category and replace the default application paths in the Text property with a relative URL (e.g. replace */cms55r2/Home.aspx* with *~/Home.aspx*).
