

## Fixed bugs

The hotfix applies to the following bugs:

### Bugs fixed in hotfix 5.5R2.4

- Dialogs - Flash objects inserted through the WYSIWYG editor weren't generated correctly in the Google Chrome browser.
- Staging - Custom data of document relationships weren't synchronized.
- Media library - An incorrect method was called in the ValidateForm method of the MediaLibraryEdit control.
- Yahoo Map - The "Show scale control" and "Show navigation control" properties of the web part didn't work correctly.
- Project Management - Roles couldn't be deleted in special cases due to project dependencies.
- Document library - Links to documents were incorrectly displayed even if the document had no file attached.
- Relationships - Relationships not assigned to the current site were displayed in CMS Desk -> Properties.
- Relationships - The path to the related document wasn't stored in a textbox field if the related document was on the right side.
- Web parts - The Silverlight application web part wasn't working correctly with the silverlight navigation application.
- Workflow - The check-in operation on the Versions tab of documents didn't work correctly in special cases.
- WebDAV - rebuilding of the source code caused an assembly version conflict.
- Reporting - Line graphs caused an exception when displaying data with only one record.
- Media library - Media file mime type wasn't set correctly in special cases.

### Bugs fixed in hotfix 5.5R2.3

- Page templates - New template wasn't created correctly in special cases.

### Bugs fixed in hotfix 5.5R2.2

- Messaging - Actions were not hidden properly when an error occurred during sending a message.
- E-commerce - Product filter did not work correctly.
- Text - Editable image web part did not work correctly when application ran internally on a different port.
- Dialogs - WYSIWYG dialogs did not work properly when media library folder name contained special characters.

### Bugs fixed in hotfix 5.5R2.1

- Project management - Users and roles couldn't be deleted in special cases due to project or task dependencies.
- Documents - Linking to child documents wasn't working correctly when they were translated into multiple cultures.
- Workgroups - New forum groups created under a workgroup from the live site didn't have their base URL set correctly.
- The Field editor didn't allow macros to be inserted into the Default value textbox for non-text fields.
- Security - Moving the position of a document was allowed in special case even if the user didn't have the Modify permission.
- Workflow - Workflow e-mails were incorrectly sent to disabled users.
- Form controls - GUID type columns created in the Field editor were causing exceptions.
- Web analytics - The context help for the Registered users section was missing.
- Messaging - It was incorrectly possible to reply/forward a message with an empty message body.

## Instructions

### PLEASE NOTE:

This hotfix wasn't fully tested so you may experience other issues caused by this hotfix.

You should always backup your project and database before applying the hotfix.

### Apply the hotfix by performing following tasks:

1. Backup your original project and database.
2. If an SQL script is available:
  - a. Change the @cultureCode parameter in SQL script to your default UI culture code (only if your default UI culture is not „en-US“)
  - b. Run the SQL script on your database.
3. Copy & replace the files from CMS folder to your web project.
4. Copy & replace the files from Source folder to your project.
5. You may need to rebuild the solution in case you are using custom handlers or precompiled web site. You can optionally do that to verify that the web site can compile without any problems.
6. If you wish to use Quick links widgets (Department quick links, Workgroup quick links, Intranet quick links) on the Intranet Portal, please open the Site Manager, select Development -> Widgets, find the widget in the Intranet Portal category and replace the default application paths in the Text property with a relative URL (e.g. replace `/cms55r2/Home.aspx` with `~/Home.aspx`).

Should you need any help with this hotfix or experience any other issues with it, please feel free to contact us at [support@kentico.com](mailto:support@kentico.com)
