

Installation

1. Unzip the MultiStepOnLineForm.zip in a local folder. You'll have three zip files named **cms_formusercontrol_selectmultiplealternativeform.zip**, **cms_webpart_MultiStepsOnLineForm.zip** and **Selectors.zip**
2. In Kentico back end select **Configuration** -> **Sites**
3. Select **Import site or objects**
4. Select **Upload package** and select the file named **cms_formusercontrol_selectmultiplealternativeform.zip**
5. Select Next and follows all the steps Kentico shows
6. Repeat steps from 2 to 5 to upload **cms_webpart_MultiStepsOnLineForm.zip** file
7. Unzip Selectors.zip into ~/CMSFormControls/Elogic

Usage

- 1) Create your online form as usual.
- 2) Mark all the fields as no required.
- 3) Prepare two or more alternative forms each for a single step you want your on-line form divided into, each one containing some of the fields available. In this step you can set required fields.
- 4) Put the Multiple Step On-line form webpart in your page.
- 5) Open its settings, fill the **Form name** selecting it from available ones and select the **Select** button near **Alternative form name**. A modal dialog is shown.
- 6) Select the **Class** from the available ones; the **Alternative form** selection will be refreshed.
- 7) Select the first Alternative form you prepared and then select 
- 8) The form will be added in **Selected** form selection
- 9) Repeat step 7 for all the alternative forms you need
- 10) You can re-order the steps selecting them and using the arrow buttons   or remove them using the delete button
