Hands on Lab 1: Kentico Enterprise Marketing Solution: Campaigns

Lab Overview

System Requirements:

• Kentico CMS 7 Enterprise Marketing Solution installed with the Sample Corporate Site

Intended Lab Audience:

- Online Marketers
- CMS Designers

Lab Introduction

Executing successful campaigns is an essential part of any marketing organization. Campaigns are a way to engage and interact with your customers. They provide an ideal mechanism to generate sales leads and collect customer information. This set of exercises is intended to show the process of creating a document based campaign for the Services page that collects customer information using an online form. Then using the collected customer information we will then score the leads for later use by the sales department. In completing this set of labs you will perform the following tasks:

- Create an Online form for collecting customer information
- Create a squeeze page for collecting customer information
- Create a Services campaign
- Create conversions
- Create a lead score
- Optimize a campaign using A/B tests

Lab 1-1: Creating the online form

Online forms are the easiest way to create a contact information form for the live site without having to write application code. Forms are built using a data driven interface and then inserted into the page using the Online form web part. In this lab we will create the contact information form and then insert it into the Services page, which is then used as the main campaign landing page.

Lab 1-1: Creating an online form

1. Log into CMS Desk and select the Tools tab and then click the Add a new form link as shown in the following screenshot.

2. In the New form dialog in the Form display name field enter Campaign Contacts and then click the Save button as shown in the following screenshot.

New Form	I	
> Forms > New Fo	rm	
Rave Save		
Form display name	Campign Contacts	Q
Form code name:	(automatic)	0
Table name:	Form_CorporateSite_ (automatic)	

3. In the Campaign Contacts form in the General tab update the following fields and then select Save.

Section	Field	Value
After the form is submitted	Display text	We will contact you shortly
	Submit button text	Submit

4. Select the Fields tab, click the Add new attribute (+) button, update the following fields and then click the Save button.

Section	Field	Value
Simple mode	Column name	First_name
Simple mode	Field caption	First name
Simple mode	Field type	Textbox
Simple mode	Maximum length	20

5. Select the Add new attribute (+) button, update the following fields and then click the Save button.

Field	Value
Column name	Last_name
Field caption	Last name
Field type	Textbox
Maximum length	30
	Column name Field caption Field type

6. Select the Add new attribute (+) button, update the following fields, and then click the Save button.

Section	Field	Value
Simple mode	Column name	Email_address
Simple mode	Field caption	Email
Simple mode	Field type	E-mail

7. Select the Add new attribute (+) button, update the following fields, and the click the Save button.

Section	Field	Value
Simple mode	Column name	Contact_type
Simple mode	Field caption	How can we help you?
Simple mode	Field type	Drop-down list
Editing control settings	Туре	Options (one value; name pair on each line-example 1;Blue)
Editing control settings	Data source	Services;Services <cr> RFP; RFP</cr>

8. In the Fields tab confirms the list of fields as shown in the following screenshot.

9. Select the On-line marketing tab, click the Overwrite existing contact information with submitted data. If unchecked, only empty values of a contact are filled check box and then click the Save button as shown in the following screenshot.

Form Properties
<u>Forms</u> > Campign Contacts
Data General Fields Form Notification e-mail Autoresponder Security Alternative forms On-line marketing Versions
r Save
✓ Log on-line marketing activity
1 0 The following section allows mapping of the form's fields to contact objects. Data submitted through the form can then be used to initialize or update contact information.
verwrite existing contact information with submitted data. If unchecked, only empty values of a contact are filled.
General
First name: (none)
Middle name: (none)

10. In the **On-line marketing** tab update the following fields and then click the **Save** button

Section	Field	Value
General	First name	First_name
General	Last name	Last_name
Address	E-mail	Email_address

Lab 1-2: Inserting the online form

1. In CMS Desk select the **Content** tab, in the Content tree select the **Services** page, then the **Design** tab, and in the **Main zone** select the **Add web part icon** (+) as shown in the following screenshot.

✓ What is a conversion?

Conversions are specific actions performed by site visitors and recorded by the Web analytics module. This is typically done for specific events you want to track or as part of a broader campaign. Once you start tracking conversions on the live site, these can be compared to other web analytics statistics like the amount of visitors. This allows you to evaluate the website and adjust marketing strategies as necessary.

In the New conversion screen in the Conversion display name field enter
 ContactInfo and then select Save& close as shown in the following screenshot.

🥂 New conversio	n	_		? 🗆 X

9. On the Live site select the Services page, update the online form with your contact information and select Submit as shown in the following screenshot.

First name:	Thomas
Last name:	Robbins
Email:	thomasr@kentico.com
How can we help you?:	Services
	Submit
	10

10. Once the form is submitted validate that you see the following screenshot.

Services

This is a sample static website section consisting of this title page and three sub-pages. Its purpose is to display static information about the services that the company provides.

All pages in this section are created using the Page (menu item) document type and are stored as standard documents in Kentico CMS content tree. The subpages are accessible by clicking the links in the left navigation, which is a part of the page template used by this page. If you have a section like this on your website, Kentico CMS allows you to offer the listed services to be purchased directly via the integrated web shop, as demonstrated in the <u>Products - > IT services</u> section.

We will contact you shortly!

11. Log into CMS Desk, select the Tools tab, then select Forms as shown in the following screenshot

12. In the Forms screen select the Edit icon (pencil) for Campaign Contacts as shown in the following screenshot.

		-				

Lab 1-2: Creating the Services campaign

Kentico EMS offers a variety of ways to create campaigns. Each is dependent on the type and purpose of your marketing strategy. With the completion of the online form we are now ready to create the document based campaign for the Services page. This campaign includes page visits to the Services page and completion of the online form.

Lab 2-1: Create a document campaign

1. Select the **Content** tab, in the Content tree select the **Services** page, then click the **Analytics** tab, **Settings** tab and in **Track campaign** select the **New** button as shown in the following screenshot.

Page Design Form Properties Analytics							
> Analytics							
Reports Settings A/B tests MVT tests MVT variants							
and a save							
Track campaign:	Select	Edit	New				
Track conversion name: Select Edit New							
Conversion value:							

2. In the New campaign dialog update the following fields and select Save & close.

Section	Field	Property
Campaign basic settings	Campaign display name	Services campaign
Campaign basic settings	Open from	Now
Campaign basic settings	Open to	Now + 2 weeks
Advanced campaign settings	Campaign impressions	20000
Advanced campaign settings	Total cost	10000

3. In the Track conversion name click the New button as shown in the following screenshot.

 Analytics 				
Reports Settings	A/B tests MVT tests MVT variants			
ave				
Track campaign:	Services_campaign	Select	Edit	New
Track conversion nan	ne:	Select	Edit	New
Conversion value:				÷

4. In the New conversion dialog in the Conversion display name field enter Services page and then select Save & close as shown in the following screenshot.

🤱 New conversio	'n		? 🗆 X
Conversion display name:	Services page		
Conversion code name:	(automatic)	·	2
			~
Conversion description:			
			~
	Save	Save & close	Close
	5010	Suve a close	li

5. In the **Conversion value** field enter **10** and then select **Save** as shown in the following screenshot

Analytics				
Reports Settings A/	B tests MVT tests MVT variants			
n Save				
Track campaign:	Services_campaign	Select	Edit	New
Track conversion name: Services_page		Select	Edit	New
Conversion value:	10			

The Services page campaign includes two tracked conversions. The first we created earlier with the online form. The Service page conversion tracks the traffic to the Services page.

Lab 2-2: Creating Campaign Data

1. In the upper right hand corner click the **Sign out** button as shown in the following screenshot.

<u>Live Site</u>	<u>Site Manager</u>	Corporate Site 💌	💄 Global Administrator	•	v7.0 RC	3	Sign Out
							ting Solution

2. On the Live site select the Services page as shown in the following screenshot.

Sign in to CMS Desk. Sign in to CMS Site Manager. The default account is administrator with blank password.

e 1			

6. Select the **Conversion count** report as shown in the following screenshot.

7. In the Campaign dropdown select the Services campaign, then in the Conversion dropdown select the Service page and validate that you see a report similar to the following screenshot.

Lab 1-3: Optimizing Campaigns with A/B testing

As a campaign progresses it's important to continually evaluate and refine. This can often include page elements like messaging and typography to find better ways to engage site visitors. In this lab we will create an A/B test of our services page as a way to increase our campaign conversions. Within Kentico EMS the first step is to create the A/B test and then create the variant page that will be used for the testing process.

What's the difference between A/B and MVT Testing?

A/B testing is different than MVT Testing. An A/B test uses a combination of pages and tests elements like copy text, layouts, images and colors. MVT Testing is focused on web part zones, web parts, and widgets.

Lab 3-1: Creating the A/B test

 Select the Content tab, in the Content tree select the Services page, select the Analytics tab, select the A/B tests tab and click the New test link as shown in the following screenshot

Content My des	sk Tools Administration E-commerce On-line marketing
☐ Copy ↑ Up New Delete Move Down Content management	Edit Preview Live site List Search View mode Other
Corporate Site Home Products News Partners Community Services Company Media	Page Design Form Properties Analytics > Analytics Reports Settings A/B tests MVT tests MVT variants Image: New test No data found. No No No No No

2. In the New test screen update the following fields and then select the Save button.

Field	Value
Display name	AB Services
Target number of conversions	100
Test from	Now
Test to	Now + 2 weeks
Test enabled	Checked

Lab 3-2: creating the variant page

1. With the Services page selected in the Content tree, select the New button as shown in the following screenshot.

2. In the New document screen at the bottom select the A/B test page variant link as shown in the following screenshot.

<u>Link an existing document</u>

 <u>A/B test page variant</u>

3. Update the following fields and then select the Save button.

Field	Value
Document name	AB_Services
Assign to A/B test	AB Services

4. Select the Page tab in the Editable region add the text This is the variant page and then select the Save button as shown in the following screenshot.

Remember the page received is random. Once you receive the Services page the cookie distributed to your machine will always open the same page. If you have a second browser available go ahead and try it!

It's random!

Lab 1-4: Scoring contacts

With the campaign running and proper demand generation our page will begin to receive site visits and contact form submissions. Once leads are collected they can be scored to show the weighting of their potential opportunities for our sales staff. In this lab we will enter our contact information and then create an Activity based scoring rule.

Lab 4-1: Creating the contact

1. From the Live site select the Services page, in the Contact form enter your contact information and click the Submit button as shown in the following screenshot

All pages in this section are created using the **Page (menu item)** document type and ε pages are accessible by clicking the links in the left navigation, which is a part of the pa website, Kentico CMS allows you to offer the listed services to be purchased directly via section.

First name:	Thomas	
Last name:	Robbins	
Email:	thomrobbins@kentic	o.com
How can we help you?:	Services	
	Submit	

2. Log into CMS Desk as Administrator select the On-line marketing tab, click the Activities tab and validate that you see the form submission as shown in the following screenshot

Activities

Lab 4-2: Creating the scoring rules

1. Click the Scoring button and then select the New score link as shown in the following screenshot.

Kent CMS De		nt Mydesk	Tools Admi	nistration	E-commerce	On-line ma	arketing
My dashboard	Web analytics	Scoring	Conversions Campaigns	Activities	Contacts	Accounts	On-line users
Dashboard		Analytics			Contact	manageme	nt
🐺 New score							

2. In the New score screen in the Display name field enter Services and then click the Save button as shown in the following screenshot.

🥰 New score					
> Scoring > Nev	w score				
Reference Save					
Display name:	Services				
Code name:	(automatic)		?		
Description:			^ ()		
Enabled:					

3. In the General tab update the following fields and select the Save button.

Field	Value
Send notification at score	20
Notification e-mail address	Your email

When a contact score reaches the value of 20, a notification email is automatically generated to the email address specified.

4. Select the **Rules** tab and select the **New rule** link as shown in the following screenshot

No data found.

5. In the New rule screen update the following fields .

Field	Value
Display name	Campaign contacts
Value	20
Rule Type	Activity

Rules are used to segment contacts for scoring. Kentico EMS supports two types of rules. Attribute based rules look for similarities in system values. Activity rules are based on the completion of a specific activity.

6. Update the following fields and then select the Save button.

Section	Field	Value
Rule Settings	Activity	Form Submission
Activity details	Form	Campaign Contacts

7. Select the General tab and click the Recalculate link as shown in the following screenshot

Score properties	i		
> Scoring > Services

	Search				
	Actions	Full name	Contact status	Score	
	<i>a</i>	Thomas Robbins		20	
	V				

÷.

Summary

In this set of Hands on Labs we looked at how to create a campaign and collect customer information. We then looked at how we can optimize this campaign further with an A/B test. Specifically, we covered the following.

- Creating an online form
- Linking an online form to contacts with EMS
- Creating a document campaign
- Creating an A/B test
- Collecting contact information
- Scoring contacts

Hands on Lab 2: Custom Table: Create and Display

Lab overview

System Requirements:

• Kentico CMS 7 with the Sample Corporate Site

Intended Lab Audience:

- CMS Designers
- CMS Developers

Lab introduction

Kentico CMS provides custom tables as a way to store and manage custom data. Technically, they are SQL tables and coupled stored procedures. Once a custom table is created and contains data, the next step is to provide a display for site visitors. In this lab we will add a custom table and then use the Basic Repeater web part to display it on a page. We will also look at how to use the Kentico CMS API to add and edit an existing item. In completing this set of labs you will perform the following tasks:

- Create a custom table
- Explore the Data Source web part
- Explore the Basic Repeater web part
- Edit a transformation for better visual display
- Add a new item to the custom table using the Kentico CMS API
- Edit an existing item using the Kentico CMS API

Lab 2-1: Creating a custom table

1. As Administrator log into CMS Site Manager, select the Development tab, then select Custom tables, and click New custom table as shown in the following screenshot.

Kentico Site Manager Sites	Administration	Settings Developme	ent Tools Dashboard	Licenses Support	t Buy
 Development Ocuntries 	Custor	m tables			
 CSS stylesheets Cultures 	New custon	n table			
Custom settings	- Actions	Display name 🔺	Code name	Table name	
Ustom tables	/ × ▼	Sample table	customtable.SampleTabl	e customtable_Sa	mpleTable

2. In Step 1- General update the following fields and then click Next.

Field	Value
Custom table display name	Customer Contacts
Custom table code name (custom table)	custom

3. In Step 2 – Data type click Next as shown in the following screenshot.

Step 2 Data type Please supply	name of the new database table and included fields.	
 Create a new database table Use an existing database table 		
Database table name:	customtable_custom	
Primary key name:	ItemID	
Include ItemGUID field		
Include ItemCreatedBy field:		
Include ItemCreatedWhen field:		
Include ItemModifiedBy field:		
Include ItemModifiedWhen field:		
Include ItemOrder field:		
		Next >

4. In Step 3 – Fields click the New attribute (+) button as shown in the following screenshot.

Step 3	Fields Please define	e custom fields of the custon	n table and their appearance in the editing for	m.	4
ItemID* ItemCreatedBy ItemCreatedWhen ItemModifiedBy ItemOrder ItemOrder ItemGUID*	↑ ↓ 	Save field Database Column name: Attribute type: Attribute size: Allow empty value: Default value: V Display attribute in the Field appearance	ItemID Integer number	Y	E

New custom table							
✓ Actions Display name ▲ Code name Table name							
1 🗙 🔻	Customer Contacts	customtable.custom	customtable_custom				
/ 🗙 🔻	Sample table	customtable.SampleTable	customtable_SampleTable				

Lab 2-2: Adding custom table data

1. As Administrator log into CMS Desk, select the Tools tab, then select the Custom tables button as shown in the following screenshot.

*	Kentico CMS Desk	Content	My desk	Tools	Administr	ation	E-commerce	On-line ma
Forms	30	Polls	Custom tables File import	-			s 📋 Messag s 📄 Abuse r	
	Co	ontent				Com	munity	

2. In the Custom tables screen select the Edit (Pencil) icon for Customer Contacts as shown in the following screenshot.

Custom tables						
→ Actions Display name →						
Customer Contacts						
Sample table						

3. In the Custom table properties screen select the **New item** button as shown in the following screenshot.

No data found.

4. In the New item screen update the following fields and then select the Save button.

Field	Value
Name	Joe Brown
Title	President
Email	joe@company.com

5. In the Edit item screen click the **Create another** button, update the following fields, and then click the **Save** button.

Field	Value
Name	Ted Thomas
Title	Marketing VP
Email	ted@company.com

6. On the Edit item screen click the Data link as shown in the following screenshot.

7. In the Custom table properties screen validate that the two items just entered are visible as shown in the following screenshot.

Custom table properties								
<u>Custom tables</u> > Customer Contacts

Lab 2-4: Displaying custom table data

1. In the zoneLeft web part zone, click the Add web part icon (+) as shown in the following screenshot.

2. In the Select web part screen select Data sources, then select the Custom table data source web part, and then click OK as shown in the following screenshot.

3. In the Web part properties (Custom table data source) screen select the Data filter tab, in the Custom table name field select the Customer Contacts (customtable.custom) and then click Ok as shown in the following screenshot.

🦂 Web part p	a Web part properties (Custom table data source)					
General						
\lor	Data filter		^			
Default Data filter	Custom table name*:	Customer Contacts (customtable.custom)				
Selection options	ORDER BY condition:	•				
System settings	Select Top N items:	>				
	WHERE condition:	•				
"0						

What is a data sources web part?

Data source web parts are used to connect and retrieve data from back end data sources like custom tables. They retrieve data and pass them to display web parts. This separation is designed to provide page based flexibility in data retrieval and display. Data sources provide reusable sources of data. They reduce page resources as data is retrieved just once and then can be used by different web parts on the same template to display content.

4. In the All web parts list enter **Basic repeater** and then click **Search (magnifying** glass) as shown in the following screenshot.

5. From the all web parts list drag the **Basic repeater** web part into the **ZoneLeft** web part zone as shown in the following screenshot.

•	/Company/Data Source - page template: ad-hoc						
	zoneLeft	Basic repeater					
	▼ 🗊 CustomTableDataSource 🎯						

6. In the Web part properties (Basic repeater) select the Content tab, and in the Data source name field enter CustomTableDataSource as shown in the following screenshot.

🦓 Web part pr	operties (Basic repeater)	Documentation
General		
\lor	Content	*
Default Visibility Content	Data source name*: CustomTableDataSource	
Transformations	Transformations	
-==	ecting to Data Sources	

The Data source name field is the connection between this web part and the data source web part we added in Step 2 and must be an exact match.

7. In the Web part properties (Basic repeater) screen select the Transformation tab, and in the Transformation name field click the Select button as shown in the following screenshot.

Reb part properties (Basic repeater)						
General						
\lor	Transformations				4	
Default	Transformation name:	•	Select	Edit	New	
Visibility						
Content	Alternating transformation name:	•	Select	Edit	New	
Transformations No data behavior	Item separator transformation name:	•	Select	Edit	New	

When data is passed from the data source web part to the Basic repeater a set of formatting code (transformation) is applied to define the output that is displayed.

In the Select transformation dialog in the Class type drop down select Custom table, in the Custom table drop down select Customer Contacts (customtable.custom), then click the customtable.custom Default transformation as shown in the following screenshot.

Select transformation	
Class type: Custom table Custom table: Customer Contacts (customtable.custom)	
Transformation name or its part:	Search
Transformation name customtable.custom.Default customtable.custom.Preview	
	Items per page: 10 💌

Where did these come from?

When we created the custom table the system automatically creates a Default and Preview transformation

9. In the **Web part properties (Basic repeater)** screen select **Ok** as shown in the following screenshot.

General	operties (Basic repeater)	-	_	_		? 🗆
General						
~	Transformations					
Default	Transformation name	► cust	omtable custom Default	Select	Edit	New

3. In the Tables.aspx form click the **Design** button as shown in the following screenshot.

ody			
🛛 Design 🛛 🗖 Sp	lit 🛛 Source	<html> <body></body></html>	

4. From the Toolbox drag the **Button** control onto **Tables.aspx** as shown in the following screenshot.

5. In the Button1 Properties window update the following fields

Field	Value
ID	CreateItem
Text	Create new item

6. On the Design tab double click the **Create new item** button as shown in the following screenshot.

Tables.aspx 🗙	
asp:button#CreateItem	
Create new item	

7. At the top of the Tables.aspx web form add the following Using statements.

l	using	CMS.SettingsProvider;
l	using	CMS.SiteProvider;
l		CMS.DataEngine;
l	using	CMS.CMSHelper;

8. In the Createitem_click event replace any existing code with the following and then select Save (CTRL+S).

```
CustomTableItemProvider ctiProvider = new
DataClassInfo customTableClassInfo =
DataClassInfoProvider.GetDataClass(customtablename);
         if (customTableClassInfo == null)
         {
             throw new Exception("table does not exist.");
         }
         else
         {
             // Create_item
             CustomTableItem item =
CustomTableItem.New(customTableClassInfo.ClassName, ctiProvider);
             // Set values
item.SetValue("Name", "Thom Robbins");
item.SetValue("Email", "thomasr@kentico.com");
item.SetValue("Title", "Dish washer");
             // Insert the item
             item.Insert();
           }
```

9. With Tables.aspx selected in the Solution Explorer press the Start (Play) button as shown in the following screenshot.

Summary

In this set of Hands on Labs we looked at how to create a custom table and then display the data using the Basic Repeater web part. We also looked at how we can edit the default transformation and use the Kentico CMS API. Specifically, we covered the following.

- Creating a custom table
- Adding data to a custom data using CMS Site manager
- Creating a new CMS page
- Using Data source web parts
- Displaying data with the Basic repeater web part
- Editing the default transformation
- Adding items using the API
- Editing items using the API

Key Resources:

Hands on Lab 3-0: Required Changes in Twitter feed web part

System Requirements:

- Kentico CMS 7 with the Sample Corporate Site
- Active Twitter account

Intended Lab Audience:

CMS Developers

Lab introduction

The Twitter feed web part in Kentico CMS 7 uses the Twitter API 1.0. This API has officially been retired and replaced with a newer version. This change will cause the Twitter feed Web part to stop working correctly. In completing this set of labs we will look at how you can update your system to the newer Twitter web parts. In completing this set of labs you will perform the following tasks:

- Update your system to the latest hotfix
- Import the updated web parts
- Retrieve the Widget URL from Twitter

⁷ This lab is not for production environments

This lab is not designed to be used on any production system. It always recommended that you test and backup any environment before performing any type of system upgrade.

Lab 3-0-1: Update to the latest hotfix

1. On your local machine click the Start button, and then click the All Programs button as shown in the following screenshot.

Summary

In this set of Hands on Labs we looked at how to update the Twitter feed web part to the latest API. This lab was meant for demonstration and it is always recommended that you follow proper upgrade procedures on any Kentico installation. Specifically, we covered the following.

- Update to the latest hotfix
- Importing the updated Twitter feed web parts
- Retrieving the Twitter Widget ID

• <u>http://devnet.kentico.com/Blogs/Juraj-Hrinik/May-2013/Changes-in-twitter-feed-web-part-in-Kentico-CMS.aspx</u>

Hands on Lab 3: Integrating Twitter with Kentico CMS

Lab Overview

System Requirements:

- Kentico CMS 7 installed with the Sample Corporate Site
- Completion of Hands on Lab 3-0: Required Changes in Twitter feed web part
- Active Twitter account

Intended Lab Audience:

- Content Administrators
- CMS Designers

Lab Introduction

Technically, Twitter is a micro blogging platform that limits real time comments (tweets) to 140 characters. What may seem like a simple technology has become a worldwide phenomenon with a projected 200 million active users. Leveraging this platform many companies are looking to Twitter as a key part of their integrated marketing campaigns and a key source of real time customer connections. With an extensive and well documented API, Twitter looks to make site integration as easy as possible. In this lab, we will add Twitter functionality to the Kentico Corporate sample site. This will enable site users to tweet and engage about the things they find on your site and enable site owners and administrators to extend their reach. In completing this set of labs you will perform the following tasks:

- Add the Twitter feed web part
- Add the Twitter follow button web part
- Add the Twitter tweet button web part
- Update the Home page template

Lab 3-1: Twitter feed web part

1. Log into CMS Desk as Administrator, in the Content tree select the Home page, and then select the Design tab as shown in the following screenshot.

2. In the web part toolbar with All web parts selected enter Twitter, then click the Search (magnify) button as shown in the following screenshot.

3. From the Web part toolbar drag the Twitter feed web part into the Main zone web part zone as shown in the following screenshot.

▼ Actions zone		
▼ Widget actions		
▼ Mobile redirection		
🔻 💟 Left zone 🛛 🖶	▼ Main zone	4
CorporateSite_RandomProducts	Twitter feed	
	veicome to the samp	le Corporate Site

4. In the **Web part properties (Twitter feed)** update the following fields and then select **Ok**.

Tab	Field	Value
General	Widget ID	Value retrieved from HOL 3- 0-2
General	User name	Your company twitter name
General	Number of tweets	3

5. In the Design tab validate that you see the TwitterFeed web part as shown in the following screenshot.

Lab 3-2: Twitter follow button web part

1. Log into CMS Desk as Administrator, in the Content tree select the Home page, and then select the Design tab as shown in the following screenshot.

2. In the web part toolbar with All web parts selected enter Twitter, then click the Search (magnify) button as shown in the following screenshot.

3. From the Web part toolbar drag the **Twitter follow button** web part into the **Main zone** web part zone as shown in the following screenshot.

Summary

In this set of Hands on Labs we have looked at how we can add Twitter support using both a Static text web part and page template. Specifically we covered the following.

- Add the Twitter feed web part
- Add the Twitter follow button web part
- Add the Twitter tweet button web part
- Update the Home page template

Key Resources:

- Feature Series: Twitter web parts
- <u>http://twitter.com/about/resources</u>

Hands on lab 4: UI Personalization

Lab Overview

System Requirements:

• Kentico CMS 7 installed with the Sample Corporate Site

Intended Lab Audience:

- CMS Designers
- CMS Developers
- Content Administrators

Lab Introduction

UI personalization enables the creation of simplified interfaces with CMS Desk. This will decrease the learning curve, remove unnecessary features and enable users to focus on areas of the system they really need. In completing this set of labs you will perform the following tasks:

- Explore CMS Desk
- Add a new tab to CMS Desk

Lab 4-1: Adding a new tab to CMS Desk

1. Log into CMS Site Manager as Administrator, select the Development tab, then click Modules and then click the Edit (Pencil) icon for CMS Desk as shown in the following screenshot.

Kentico Site Manager Sites	Administration S	Settings Development Tools Dashboard
 Development Countries 	🔒 Module	IS .
GS stylesheets	Rew module	
Custom settings	Module name:	
 Device profiles Document types 	Site name:	(all) <u>Reset</u>

5. Log into CMS Desk as Administrator click the Go to Kentico tab as shown in the following screenshot.

Summary

In this set of Hands on Labs we have looked at how to create UI personalization. Specifically we covered the following.

- Looked at UI personalization
- Added a new tab to CMS Desk

Key Resources:

• <u>UI Personalization overview</u>

Hands on Lab 5: Integrating Facebook with Kentico CMS

Lab Overview

System Requirements:

- Kentico CMS 7 installed with the Sample Corporate Site
- Active Facebook account

Intended Lab Audience:

- CMS Designers
- CMS Developers
- Content Administrators

Lab Introduction

Facebook has become an internet marketing sensation, with third party estimates of almost 200 million users and reports that almost two thirds of these log in daily. For many marketers, Facebook has become an essential ingredient for online and integrated marketing campaigns. Facebook provides marketers and web site owner's paid advertising models that include user profiling, targeted advertisements, community collaboration and networking opportunities. Non paid opportunities enable marketers and web site owner's the opportunity for their customers to discuss, share and recommend content and products with their social network. Both provide an opportunity for companies to build their brand, extend reach and collaborate with customers. Facebook provides an extensive API that any website owner can leverage. In this lab, we will add Facebook functionality to the Kentico Corporate sample site. In completing this set of labs you will perform the following tasks:

• Add a Facebook recommendations web part

Lab 5-1: Adding a Facebook Recommendations web part

1. Log into CMS Desk as Administrator, in the Content tree select the Home page, and then select the Design tab as shown in the following screenshot.

Kentico CMS Desk Content My de	esk Tool:	s Admi	nistration E-commerce O	n-line marketing
New Delete Avore Delete Down	Edit	t Pr	eview Live site List	Search Other
🗢 🕘 Corporate Site®	Page	Design	Form Properties Analyt	ics
Home Products		-	Sign in to <u>CMS Desk</u> . Sigr	n in to <u>CMS Site Mana</u>
 News Partners Community 			🕟 IT Comp	bany

2. In the web part toolbar with All web parts selected enter Facebook, then click the Search (magnify) button as shown in the following screenshot.

3. From the Web part toolbar drag the Facebook recomendations web part into the Main zone web part zone as shown in the following screenshot.

 Actions zone 		
▼ Widget actions		
▼ Mobile redirection 🛞		
🔻 🗓 Left zone 🛛 🕂	▼ Main zone 🕂	
▼ Sandom products		Í
Featured product	Content te:t Tacebook recommendations Velcome to the sample Corporate Site	
	If you are new to Kentico CMS, please read the following information before you start exploring the website:	

4. In the Web part properties (Facebook recommendations) update the following fields and then select Ok.

Tab	Field	Value
Settings	Doman	http://www.kentico.com

Facebook recommendations web part

This will evaluate the current logged in user against the <u>http://www.kentico.com</u> <i>domain.

5. In the Design tab validate that you see the Facebook recomendations web part as shown in the following screenshot.

Welcome to the sample Corporate Site

Summary

In this Hands on Lab we have looked at how to use the built in web parts included with Kentico CMS. Specifically we covered the following.

- Identifying the Facebook web parts
- Implementing the Facebook recommendations button

Hands on Lab 6: Auto-posting to Social Media with Advanced Workflow

Lab Overview

System Requirements:

- Kentico CMS 7 installed with the Sample Corporate Site
- Active Twitter Account
- Active bit.ly account

Intended Lab Audience:

- CMS Designers
- CMS Developers
- Content Administrators

Lab Introduction

Social media has become an incredibly important part of any marketing campaign. The problem is that using social media can take a lot of time. For marketers this is often a luxury that is not available. Using a combination of social media integration and Advanced workflow with Kentico you are able to auto post to your social media accounts when a new document is published. In this lab we will create a new Advanced workflow using the Kentico corporate site that auto posts to Twitter when a new blog post is published. In completing this set of labs you will perform the following tasks.

- Understand what is needed to integrate Twitter and bit.ly with Kentico
- Setup social media integration with Kentico
- Create a new Advanced workflow
- Create a new workflow step that publishes to Twitter
- Set a workflow scope for blogs

Lab 6-1: Create the Twitter application

1. Open a browser window and with your Twitter account log into <u>https://dev.twitter.com/apps</u> and then select **Create a new application** as shown in the following screenshot.

	Home					
nttps://dev.twitter.com/apps	y Developers	API Health Blog	Discussions Documentation	Search	Q Q	-
Eile Edit View Higtory Bookmarks Iools Help My applications Twitter Developers +] ▼ C 8 - Google	

2. In the Create new application screen update the following fields and then click the Create your Twitter application.

Field	Value
Name	Name of your website
Description	Description of your website
Website	URL of your website

3. Click the name of the application just created, then click the Setting tab, and in the Application type section select Read and write as shown in the following screenshot and then click the Update this Twitter application's settings.

Application Type

4. Select the Details tab and write down the Consumer key, Consumer secret, Access token, Access token secret as shown in the following screenshot.

Your application's OAuth settings. Keep the "Consumer secret" a secret. This key should never be human-readable in your application.		
Access level	Read and write About the application permission model	
Consumer key

OAuth settings

Use the access token string as your "oauth_token" and the access token secret as your "oauth_token_secret" to sign requests with your own Twitter account. Do not share your oauth_token_secret with anyone.

Access token		
Access token secret		
Access level	Read and write	
"8		
Why write	it down?	

This information will be used later in the lab as the basis for integration for Kentico.

Lab 6-2: Collect your bit.ly information

1. Log into bit.ly with your account, and in the dropdown select **Settings** as shown in the following screenshot.

 ahoy, thomrobbins 🔻
HELP
SETTINGS
TOOLS
SIGN OUT

2. In the Settings screen select the Advanced tab as shown in the following screenshot.

Settings	يعفدر
IDENTITY PASSWORD SAVING CONNECTED ACCOUNTS ADVANCED	LABS

3. At the bottom of the screen in the Legacy API Key section click the Show legacy API key as shown in the following screenshot.

Legacy API Key

If you already use a bitly API key to grant access to 3rd party applications, you can reset it here Show legacy API key

4. Write down the Login and API key as shown in the following screenshot.

This information will be used later in the lab for integration with Kentico.

Lab 6-3: Setup social media integration with Kentico CMS

1. Log into Site Manager as Administrator, click the Settings tab, in the left pane tree view expand the Social networks node and then click Twitter as shown in the following screenshot.

Kentico Site Manager Sites Administration	Settings Development Tools Dashboard	Licenses Support

This information will be used later in the lab for integration with Kentico.

Lab 6-4: Testing social media integration

 Log into CMS Desk select the Content tab, in the Content tree expand Community, then Blogs and then Andrew Jones Blog as shown in the following screenshot.

2. In the Content management tab select **New** and then **Blog Post** as shown in the following screenshot.

3. In the New blog post screen update the following fields and then select Save.

Field	Value
Post title	Test post – please ignore
Post summary	Test post that we will send to twitter
Post text	An example of using the integration with twitter

4. At the bottom of the new blog post confirm that you see the **Post at Twitter** box as shown in the following screenshot.

	Post at Twitter		
Auto post at Twitter:			
	Tweet wasn't published yet	0/140	Post at Twitter

5. In the **Post at Twitter** box update the following fields and then click Post at Twitter.

Field	Value
Auto post at Twitter	Don't forget to check out Kentico at http://www.kentico.com

6. Confirm that you see the success message and then click the Tweet URL as shown in the following screenshot.

	Post at Twitter		
	Don't forget to check out Kentico at http://www.kentico.com		
Auto post at Twitter:			
	Tweet was already published http://kwitter.com/trobbins/status/395342339788394496	59/140	Post at Twitter

7. Validate that you see the Tweet and the shortened URL as shown in the following screenshot.

You have successfully tested the Twitter and URL shortening integration with Kentico.

Lab 6-5: Setting up the advanced workflow

1. Log into Site Manager as Administrator, click the Development tab, in the left pane tree view, click Workflows, and in the right pane, click New advanced workflow as shown in the following screenshot.

2. On the Workflow schemes page, in the Display name box, type *Social_Post*, and then click **Save** as shown in the following screenshot.

Workflow schemes	
Workflows Actions Macro rules	
> Workflows > New advanced workflow	
Save	
Display name: Social_Post	
Code name: (automatic)	0

3. Click the **Steps** tab, and drag the **Publish to Twitter** step onto the design surface as shown in the following screenshot.

Workflow schemes					
Workflows Actions Macro rules					
> Workflows > Social_Post					
General Steps Scope E-mails	Documents Versions				
Delete	ent Delete document Import translation	Link document Move document	Publish to Facebook	C Publish to Twitter	Send e-mail
Edit	Published 🛛 🗙	Archived 🔽 🗙		/	
· · · · · · · · · · · · · · · · · · ·					
	Publish to Twitter				
	Y				

4. On the design surface in the **Published** step select the **Edit (Pencil)** icon as shown in the following screenshot.

5. In the Workflow step properties screen update the following fields, then select Save and then click Close.

Section	Field	Value
Timeout settings	Specific interval	Selected
Timeout settings	After	1 minute
Timeout settings	Leave through	Source point 'timeout'

This will create a timer that will fire 1 minute after the document is published.

6. On the design surface for the **Published** step confirm that you see the timer icon and blue connector as shown in the following screenshot.

7. On the design surface for the **Published** step drag the blue connector to the **Publish** to **Twitter** step as shown in the following screenshot.

- Edit Published X Archived X Published X Archived X Publish to Twitter X Edit step properties
- 8. On the design surface for the **Publish to Twitter** step select the **Edit step properties** (pencil) icon as shown in the following screenshot.

9. In the Workflow step properties in the Action 'Publish to Twitter' parameters next to Text select the triangle selector as shown in the following screenshot.

> Workflow s	step properties
> Steps > Publish to	o Twitter
General	
Rave	
General Step type:	Action
Display name:	Publish to Twitter
Code name:	PublishToTwitter 2
Action 'Publish to	to Twitter' parameters

10. In the Edit value text field enter the following macro and then select Save.

New Content Alert: {% DocumentName %} available at http://yourURL{% Document.NodeAliasPath #%}.aspx

This macro is resolved when posted to Twitter and will include the document name and shortened URL.

11. In the Workflow step properties screen select **Save** and then **Close** as shown in the following screenshot.

> Workflow	step properties	? 🗆 X
> Steps > Publish to	o Twitter	
General

15. In the Scope ID:1 screen update the following fields and then select Save.

Section	Fields	Value
General	This scope covers	Specified documents and its children
General	Туре	Apply workflow on documents in this scope
Advanced	Document type	Blog Post (CMS.BlogPost)

In this example we created a workflow for blog posts only. You can have multiple scopes that cover multiple different document types.

Lab 6-6: Executed the advanced workflow

1. Log into CMS Desk in the Content tree expand Community, then Blogs, select Andrew Jones Blog and then click New as shown in the following screenshot.

2. In the New document screen select **Blog post** as shown in the following screenshot.

New document
Please select new document type:
Blog month
Blog post
Link an existing document
A/B test page variant

3. In the New blog screen update the following fields and then select Save.

Field	Value
Post Title	I am trying out Kentico CMS Hands on Labs
Post date	Select Now
Post Summary	I am doing a lab in the Kentico CMS Hands on Labs series
Post Text	I am almost done and this is a test of the social integration features.

4. In the New blog post screen click **Publish** as shown in the following screenshot.

What am I looking at?

This blog post is under the Social Post workflow we created in the previous lab.

5. Confirm that you see the workflow has moved to the **Published** step as shown in the following screenshot.

6. Wait one minute and then refresh the document to confirm that the document has been moved to the **Publish to Twitter Step** as shown in the following screenshot.

8. Open your Twitter account and verify that you see the Tweet as shown in the following screenshot.

Tweets

Summary

In this Hands on Lab we have looked at how to use Advanced workflow to automatically post to Twitter. Specifically we covered the following.

- What information is needed from Twitter to use social medial integration with Kentico CMS
- What information is needed to from bit.ly to use URL shortening with Kentico CMS
- How to create a new Advanced workflow
- How to create a scope that will select documents for an Advanced workflow

Key Resources:

- <u>http://devnet.kentico.com/docs/devguide/index.html?workflow_designing_adv_anced.htm</u>
- <u>http://devnet.kentico.com/Videos/Feature-series/Kentico-Feature-Series-</u> <u>Advanced-workflow.aspx</u>

Hands on Lab 7: Syndicating content with Issuu.com

System Requirements:

- Kentico CMS 7 with the Sample Corporate Site
- Active account with Issuu.com

Intended Lab Audience:

- CMS Designers
- CMS Developers

Lab introduction

The traditional publishing industry has moved increasingly online. This move has created a variety of self-service publish options across the internet. These sites are ideal for long form content like white papers and e-books. Enabling a broader readership, additional marketing opportunities and even extended analytics. In this lab we will publish a document on <u>Issuu.com</u> and then syndicate the content to a Kentico site using the flipbook option. In completing this set of labs you will perform the following tasks:

- Publish a document to issuu.com
- Create a blog post that syndicates the content

Lab 7-1: Publish the document

1. Log into issuu.com and select the Upload button as shown in the following screenshot

2. Drag the file you want published to the **Select a file to get started** section as shown in the following screenshot

3. Complete the Title and Description fields and then click Publish Now as shown in the following screenshot

4. From the main menu select the **My Publications** menu option and then click the uploaded document as shown in the following screenshot.

10. Paste the issuu.com embed code from Lab 8-1 step 8 into the Post summary box and then click Save as shown in the following screenshot

11. Click the Live site button to view the document as shown in the following screenshot

Summary

In this set of Hands on Labs we looked at how to syndicate content using issuu.com and then display the document using their autoflip feature. Specifically, we covered the following.

• Upload the document to issuu.com

- Copying the embed code
- Pasting the code into a Kentico CMS blog post
