Fixed bugs

The hotfix applies to following bugs:

Bugs fixed in hotfix 4.1.1:

- SmartSearch - Creation of new index ignored white space analyzer.
- SmartSearch - "No result text" message wasn't displayed properly.
- Custom tables – Exception was thrown in the custom table data list in CMS Desk UI when user selected fields to be displayed in the list of data.
- Tags – In some cases tag selection didn't work properly when tag group was changed on Metadata tab in document properties.
- WYSIWYG editor dialogs – In some cases page event validation exception was thrown.
- WYSIWYG editor - Wrong URL of the inserted images, media and links in e-mail templates
- Import/Export – Importing site into existing site in one instance broke integrity of the documents in special cases.
- Forums – In some cases community forum didn't display forum attachments properly.
- In some cases URL with trailing slash wasn't correctly generated.
- Web analytics - KeyNotFoundException occurs when smart checking is used in web analytics.
- If Windows authentication was enabled, form state helper didn't work properly
- Javascript error occurs while unloading the page with YouTube video player
- Newsletters - images were not displayed in incoming e-mails
- Macro resolver – Default values weren't correctly resolved.
- Deployment - Web site couldn't be compiled to a single assembly due to class duplicity

Instructions

PLEASE NOTE:

This hotfix wasn't fully tested so you may experience other issues caused by this hotfix.

You should always backup your project and database before applying the hotfix.

Apply the hotfix by performing following tasks:

1. Backup your original project and database
2. If SQL script is available, run the SQL script on your database
3. Copy the files from CMS folder to your web project
4. Rebuild the project

Should you need any help with this hotfix or experience any other issues with it, please feel free to contact us at support@kentico.com
